Summary

The virtual water content of a commodity is the volume of water used to produce this commodity. International trade in food implies international flows of virtual water. For water-scarce countries it can be attractive to import virtual water (through import of water-intensive products), thus relieving the pressure on the domestic water resources.

This study aims to develop a methodology to assess the virtual water content of various types of livestock and livestock products and to quantify the virtual water flows related to the international trade in livestock and its products. The results are then combined with the estimates of virtual water trade flows associated with international crop trade as reported in Hoekstra and Hung (2002, 2003), to get a comprehensive picture of the international virtual water flows. The study covers the period from 1995 to 1999.

First, the virtual water content (m^3/ton) of live animals is calculated, based on the virtual water content of their feed and the volumes of drinking and service water consumed during their lifetime. Second, the virtual water content is calculated for each livestock product, taking into account the product fraction (ton of product obtained per ton of live animal) and the value fraction (ratio of value of one product from an animal to the sum of the market values of all products from the animal). Finally, virtual water flows between nations are derived from statistics on international product trade and virtual water content per product.

The global volume of international virtual water flows is estimated to be 1031 Gm^3 per year (695 Gm^3/yr from the trade in crops and 336 Gm^3/yr from trade in livestock and livestock products). This means that about 20% of the global water use in agriculture is aimed at producing products for export. The countries with the largest net virtual water export are: the United States, Australia, Canada, Argentina and Thailand. The countries with the largest net virtual water import are: Japan, Sri Lanka, Italy, South Korea and the Netherlands.

The total water use within a country itself is not the correct measure of a nation's actual appropriation of global water resources. In the case of net import of virtual water into a country this virtual water volume should be added to the total water use within the country, in order to get a picture of a nation's real call on the global water resources. Similarly, in the case of net export of virtual water from a country this virtual water volume should be subtracted from the volume of internal water use. The total of internal water use and net virtual water import can be seen as the 'water footprint' of a country, the total volume of *water* needed to produce the goods and services consumed by the inhabitants of the country. This concept is analogous to the 'ecological footprint' of a nation, a concept that refers to the amount of *land* needed to produce the goods and services consumed by the inhabitants of a country. This study calculates the water footprint for each nation of the world. This study does not yet include green water use within the country. Future research on water footprints should include this part of water use as well, to get a more realistic figure.

1. Introduction

1.1. The concept of virtual water

Since the Dublin conference in 1992 it is widely accepted that water is a scarce resource that should be treated as an economic good. Efficiency in water use can be categorised at three broad levels (Hoekstra and Hung, 2002). The lowest level is the user level, where efficiency can be improved by adopting water-saving technologies and by measures such as water pricing, awareness raising etc. The second level of efficiency relates to the allocation and re-allocation of water resources to specific higher-value uses, and more equitable use by all stakeholders. Generally efficiency at this level is achieved through government interventions in the form of different policies in the water sector. The highest level of efficiency concerns the trade in water. As water is quite a bulky item to transport, trading water in its actual form is costly, which is where the concept of virtual water comes into the picture.

The term ‘virtual water’ was introduced by Tony Allan in the early 1990s (Allan, 1993; 1994). It is defined as the volume of water required to produce a commodity or service (Allan, 1998, 1999; Hoekstra, 1998). When there is a transfer of products or services from one place to another, there is little direct physical transfer of water (apart from the water content of the product, which is quite insignificant in terms of volume). There is however a significant transfer of virtual water. From a country’s perspective, Haddadin (2003) has defined this water also as ‘exogenous water’.

More precisely, the term virtual water can be defined from two distinct approaches. One is from the *production point of view* and the other from the *consumption point of view* (Hoekstra, 2003). The first approach quantifies virtual water as the *real water* used in the production of the commodity. It is *production site specific*, as it depends on the production conditions, including place and time of production and local water use efficiency. In the second approach, the virtual water content is defined as the amount of water that would have been required to produce the product in the place where the product is used. Hence it is *consumption site specific*. The second concept is particularly useful if we think of how much water we can save by importing a commodity instead of producing it ourselves. In the current study we adopt the first definition of virtual water, which has the advantage that it has a straightforward empirical basis.

To produce one kilogram of grain, grown under rain-fed and favourable climatic conditions (say in the Netherlands or Canada), we need about one to two cubic metres of water, that is 1000 to 2000 kg. For the same amount of grain grown in an arid country (say in Egypt or Israel), where the climatic conditions are less favourable (high temperature, high evapotranspiration), we need up to 3000 to 5000 kg. Livestock and livestock products are more water intensive. Roughly, livestock products contain 5 to 20 times more virtual water per kg than crop products.

Not only agricultural products contain virtual water – most studies to date have been limited to the study of virtual water in crops – but industrial products and services also contain virtual water.

1.2. Virtual water flows between nations

For a water-scarce region it can be attractive to adopt a policy of producing and exporting products with relatively low virtual water content and importing products having higher virtual water content. The volume of virtual water embodied in food imports and exports will remain a valid concern for water-short nations seeking to maximise the value of their limited water supplies. The labour, land and capital incorporated in the products must also be considered in countries where one or more of those resources is limited (Wichelns, 2001). The volume of the virtual water flow between two nations depends upon the virtual water content of the product traded and the physical volume of trade.

Virtual water flows between nations in relation to the international trade in crops have been quantified by Hoekstra and Hung (2002, 2003). A rapid assessment of the virtual water flows between nations in relation to international trade in livestock and livestock products was done by Chapagain and Hoekstra (2003). The current study can be seen as an improvement to the latter rapid assessment. The major improvements concern the collection of more accurate basic data.

1.3. Objectives of the study

The main objective of the current study is to assess the volumes of international virtual water flows from the trade in livestock and livestock products during the five separate years from 1995 to 1999. We first estimate the virtual water content of different kinds of livestock and their products. After having estimated the virtual water flows related to trade in livestock and livestock products, we show the complete picture of global virtual water flows by including the earlier assessments by Hoekstra and Hung (2002) of virtual water flows related to international trade in crops.

2. Method

2.1. Overview

The international virtual water flows related to the trade in livestock and livestock products are calculated by multiplying trade volumes (ton/yr) with their virtual water content (m^3/ton). It is necessary to first assess the virtual water content of a live animal and then distribute this among the different products from the animal. We distinguish n_p products, which originate from n_a kinds of animal. Each individual product comes from one and only one particular kind of animal. For simplification it is assumed here that a livestock product exported from a certain country is actually fully produced within that country, with the animal feeding, drinking and living on domestic resources.

2.2. Calculation of the virtual water content of live animals

2.2.1. The three components of the virtual water content of a live animal

The virtual water content of an animal at the end of its life span is defined as the total volume of water that was used to grow and process its feed, to provide its drinking water, and to clean its housing and the like. There are three components to the virtual water content of a live animal:

$$VWC_a[e,a] = VWC_{feed}[e,a] + VWC_{drink}[e,a] + VWC_{serv}[e,a] \quad (1)$$

where $VWC_a[e,a]$ represents the virtual water content of animal a in exporting country e expressed in cubic metres of water per ton of live animal. VWC_{feed} , VWC_{drink} and VWC_{serv} are the virtual water contents from feeding, drinking and servicing respectively. We express all components in terms of cubic metres of water per ton of live animal.

2.2.2. Virtual water content from feed consumed

The virtual water content of an animal from the feed consumed has two parts. The first is the actual water that is required to prepare the feed mix and the second is the virtual water incorporated in the various feed ingredients. The virtual water content from feeding an animal at the end of its life span is calculated as follows:

$$VWC_{feed}[e,a] = \frac{\int_{birth}^{slaughter} \left\{ q_{mixing}[e,a] + \sum_{c=1}^{n_c} SWD[e,c] \times C[e,a,c] \right\} dt}{W_a[e,a]} \quad (2)$$

Here $VWC_{feed}[e,a]$ is expressed in cubic metres of water per ton of live animal. The variable $q_{mixing}[e,a]$ represents the volume of water required for mixing the feed of animal a in exporting country e (m^3/day). $C[e,a,c]$ is the quantity of feed crop c consumed by animal a in exporting country e , expressed in tons per day. $SWD[e,c]$ is the specific water demand of crop c in exporting country e , expressed in m^3 per ton of crop. $W_a[e,a]$ is the average live weight of animal a in exporting country e at the end of its life span, expressed in tons.

The specific water demand of a crop is the volume of water required to produce a certain quantity of the crop and is expressed in m^3/ton . For each feed crop c , average specific water demand is calculated per country e :

$$SWD[e,c] = \frac{CWR[e,c]}{CY[e,c]} \quad (3)$$

Here $CWR[e,c]$ represents the crop water requirement of crop c in country e (m^3/ha) and $CY[e,c]$ the crop yield (ton/ha). In calculating the crop water requirements the CROPWAT model developed by the FAO is used. The climate data needed for the crop water requirement calculations are taken from the CLIMWAT database of the FAO. Other crop parameters are taken as in-built in the CROPWAT model. It uses the FAO Penman-Monteith equation to calculate the reference crop evapotranspiration (ET_0 , mm/day). The crop evapotranspiration (ET_c , mm/day) is calculated using crop coefficients (K_c), also in-built within the CROPWAT model for each crop type. The CROPWAT model integrates the ET_c value over the entire growing period to get the total water requirement of the crop. The crop yield data are taken from FAOSTAT.

2.2.3. Virtual water content from drinking water

The virtual water content of an animal originating from drinking is equal to the total volume of water used as drinking water supply, calculated over the entire life span of the animal. We express the virtual water content here in terms of volume of water per ton of live animal, and thus calculate the virtual water content from drinking as:

$$VWC_{drink}[e,a] = \frac{\int_{birth}^{slaughter} q_d[e,a] dt}{W_a[e,a]} \quad (4)$$

Here $q_d[e,a]$ is the daily drinking water requirement of animal a in exporting country e (m^3/day). $W_a[e,a]$ is the live weight of the animal at the end of its lifetime.

2.2.4. Virtual water content from service water

The virtual water content of an animal from the service water used is equal to the total volume of water used to clean the farmyard, wash the animal and other services necessary to maintain the environment during the entire life span of the animal. The virtual water content from service water is calculated as:

$$VWC_{serv}[e,a] = \frac{\int_{birth}^{slaughter} q_{serv}[e,a] dt}{W_a[e,a]} \quad (5)$$

$VWC_{serv}[e,a]$ represents the virtual water content of animal a in exporting country e and is expressed in cubic metres of water per ton of live animal. $q_{serv}[e,a]$ is the daily service water requirement (m^3/day) of animal a in exporting country e .

2.3. Calculation of the virtual water content of livestock products

2.3.1. Levels of production

Based on Section 2.2 we can calculate the full virtual water content of an animal. We would also like to know, however, what the virtual water content is of particular livestock products, such as meat, milk, cheese, butter, leather, etc. The virtual water content of a live animal contributes to the products from the animal. We have to distribute the virtual water content of a live animal in such a way among the animal products that neither double counting nor un-accounting occur. Double counting, for example, would happen if one were to first attribute the full virtual water content of a cow to its milk, and then later again to its meat.

In order to analyse in a systematic way we assume levels of production. The products derived directly from a live animal are called primary livestock products. For example, cows produce milk, a carcass and skin as their primary products. Some of these primary livestock products are then further processed into so-called secondary products, such as cheese and butter from the primary product milk and meat and sausage from the carcass.

2.3.2. First level of processing (primary products from live animals)

The virtual water content of a primary product includes (part of) the virtual water content of the live animal plus the processing water needed. The processing water requirement per ton of live animal is defined as:

$$PWR[e,a] = \frac{Q_{proc}[e,a]}{W_a[e,a]} \quad (6)$$

Here $PWR[e,a]$ is the processing water requirement per ton of live animal a for producing primary products in exporting country e (m^3/ton). $Q_{proc}[e,a]$ is the volume of processing water in m^3 per live animal a in exporting country e .

The total virtual water content of the live animal (VWC_a) and processing water requirement (PWR) should be attributed to the primary products per ton of live animal in a logical way. To do this we introduce two terms, ‘product fraction’ and ‘value fraction’. The product fraction $pf[e,p]$ of product p in exporting country e is defined as the weight of the primary product obtained per ton of live animal (Chapagain and Hoekstra, 2003).

$$pf[e,p] = \frac{W_p[e,p]}{W_a[e,a]} \quad (7)$$

Here $W_p[e,p]$ is the weight of primary product p obtained from one live animal a in exporting country e . $W_a[e,a]$ is the live weight of animal a in exporting country e . Generally the product fraction is less than one, because the product is derived from just part of the animal. However, if a product is obtained during the lifetime of an animal, as in the case of milk and eggs, the pf can be greater than one (see Appendix IXa).

The value fraction, $vf[e,p]$, is the ratio of the market value of one product from the animal to the sum of the market values of all products from the animal.

$$vf[e,p] = \left[\frac{v[p] \times pf[e,p]}{\sum(v[p] \times pf[e,p])} \right] \quad (8)$$

The denominator is totalled over the primary products that originate from root animal a . The variable $v[p]$ is the market value of product p ($\text{US\$}/\text{ton}$). Hence, the virtual water content (VWC) of primary product p in m^3/ton is,

$$VWC_p[e,p] = (VWC_a[e,a] + PWR[e,a]) \times \frac{vf[e,p]}{pf[e,p]} \quad (9)$$

2.3.3. Second level of processing (secondary products from primary products)

The production of secondary products also requires some processing water. The virtual water content of a secondary product is composed of (part of) the virtual water content of the primary root product and the processing water consumed. In this case the processing water requirement, $PWR[e,p]$, is defined as the volume of water required to process one ton of primary product p into secondary products.

The product fraction, $p_f[e,p]$, is now defined as the ratio of the weight of secondary product p obtained per ton of primary product in exporting country e . Similarly the value fraction $v_f[e,p]$ is defined as the ratio of the market value of one secondary product to the total market value of all products from the primary product.

Hence, the virtual water content of secondary product p in m^3/ton is calculated using the same approach as described for primary products (Equation 9). The difference is that here we take the virtual water content of the primary product and the water requirements for processing the primary products into secondary products as the basis.

In the same way we can calculate the virtual water content for tertiary products, etc. The first step is always to obtain the virtual water content of the input (root) product and the water necessary to process it. The total of these two elements is then distributed over the various output products, based on their product fraction and value fraction.

2.3.4. Illustration of the calculation of the virtual water content of 'bovine products'

The method to calculate the virtual water content of a live animal and its livestock products is illustrated here with a simple example of bovines producing a carcass, offal, semen and raw skin as primary products and carcass frozen, bovine cuts and meat cured as secondary products from the carcass, in an industrial farming system. In this group we deal with cows bred for beef production. The average data taken for the calculation are: live weight of a fully grown cow 545 kg, drinking water requirements for an adult cow 38 l/day/animal, for a calf of 5 months 5 l/day/animal, service water requirements for an adult cow 11 l/day/animal, for a calf of 5 months 2 l/day/animal, animal age at the time of slaughter 36 month.

For this sample calculation, the feed data for a calf and an adult cow are taken from the Canada Statistics Division (Statistics Canada, 2002). The *specific water demand* for different types of crop in Canada is taken from Hoekstra and Hung (2002). Mixing water requirement for feed preparation is assumed to be 50 per cent of the total volume of feed consumed. Assuming a linear growth in feed consumption with age until the start of adulthood, the average feed volumes are calculated. These feed volumes are then multiplied by the specific water demands of the corresponding crop types, to get the volume of virtual water consumed by the animal per day (see Appendix IXb).

The virtual water from feed, drinking and servicing is integrated over its life span to get the total virtual water content of a live animal, which is 5252 m^3/animal . As the live weight of the animal is 0.545 ton, the virtual water content of bovine cattle in Canada is equivalent to 9636 m^3/ton of live animal and if an animal ready to be slaughtered is traded alive the total virtual water traded is about 9636 m^3/ton . The primary products of the animal are the carcass, offal, semen and raw skin. The *product fractions* and *value fractions* for these primary products are calculated in Table 2.1.

Table 2.1. Calculation of product fraction and value fraction of primary products from a bovine.

	Carcass	Offal	Semen	Skin
Product fraction, <i>pf</i>	0.52	0.07	0.0001	0.06
Market value (US\$/ton)	3568	2013	83968	2230
Value obtained per ton of live animal (10^3 US\$)	= 0.52x3568 = 1855	= 0.07 x 2013 = 141	= 0.0001 x 83968 = 8	= 0.06x2230 = 134
Total value obtained per ton of live animal (10^3 US\$)		= 1855+141+8+134	= 2138	
Value fraction, <i>vf</i>	= 1855/2138 = 0.87	= 141/2138 = 0.066	= 8/2138 = 0.0037	= 134/2138 = 0.063

The quantity of water used in the abattoir to process a bovine, the processing water requirement (*PWR*), is 10 m³/ton of live weight of the animal. The virtual water contents of these primary products are calculated as:

$$VWC[\text{carcass}] = \left\lfloor \frac{(9636+10) \times 0.87}{0.52} \right\rfloor \approx 16100 \text{ m}^3/\text{ton}$$

$$VWC[\text{offal}] = \left\lfloor \frac{(9636+10) \times 0.066}{0.07} \right\rfloor \approx 9100 \text{ m}^3/\text{ton}$$

$$VWC[\text{semen}] = \left\lfloor \frac{(9636+10) \times 0.0037}{0.0001} \right\rfloor \approx 378800 \text{ m}^3/\text{ton}$$

$$VWC[\text{skin}] = \left\lfloor \frac{(9636+10) \times 0.063}{0.06} \right\rfloor \approx 10100 \text{ m}^3/\text{ton}$$

The carcass may be further processed into secondary products, such as ‘carcass frozen’, ‘bovine cuts, bone in’, and ‘meat cured’. As these products are mutually exclusive we have only one product at a time, hence their value fraction is 1 (Table 2.2).

Table 2.2. Processing water requirement, value fraction and product fraction of secondary products from bovine carcass.

	Carcass frozen	Bovine cuts, bone in	Meat cured
Quantity per ton of carcass, <i>pf</i>	1.00	1.00	0.98
Value fraction, <i>vf</i>	1	1	1
Processing water requirement, <i>PWR</i> (m ³ /ton)	0	0	5

The virtual water contents of these secondary products are calculated as:

$$VWC[\text{carcass frozen}] = \left\lfloor \frac{(16100+0) \times 1}{1} \right\rfloor \cong 16100 \text{ m}^3/\text{ton}$$

$$VWC[\text{bovine cuts}] = \left\lfloor \frac{(16100+0) \times 1}{1} \right\rfloor \cong 16100 \text{ m}^3/\text{ton}$$

$$VWC[\text{meat cured}] = \left\lfloor \frac{(16100+5) \times 1}{0.98} \right\rfloor \cong 16400 \text{ m}^3/\text{ton}$$

The virtual water content of secondary products from the primary products offal and raw skin can be calculated in a similar manner. If these primary products are further processed before being traded, the processing water requirement should be added. For example, 1 ton of raw skin produces only 0.40 ton of bovine leather treated and this requires 30 m³ of water. Thus the virtual water content of the treated skin is calculated as,

$$VWC[\text{leather}] = \left\lfloor \frac{\{(10100+30) \times 1\}}{0.40} \right\rfloor \cong 25300 \text{ m}^3/\text{ton}$$

The above illustration is schematically presented in Figure 2.1.

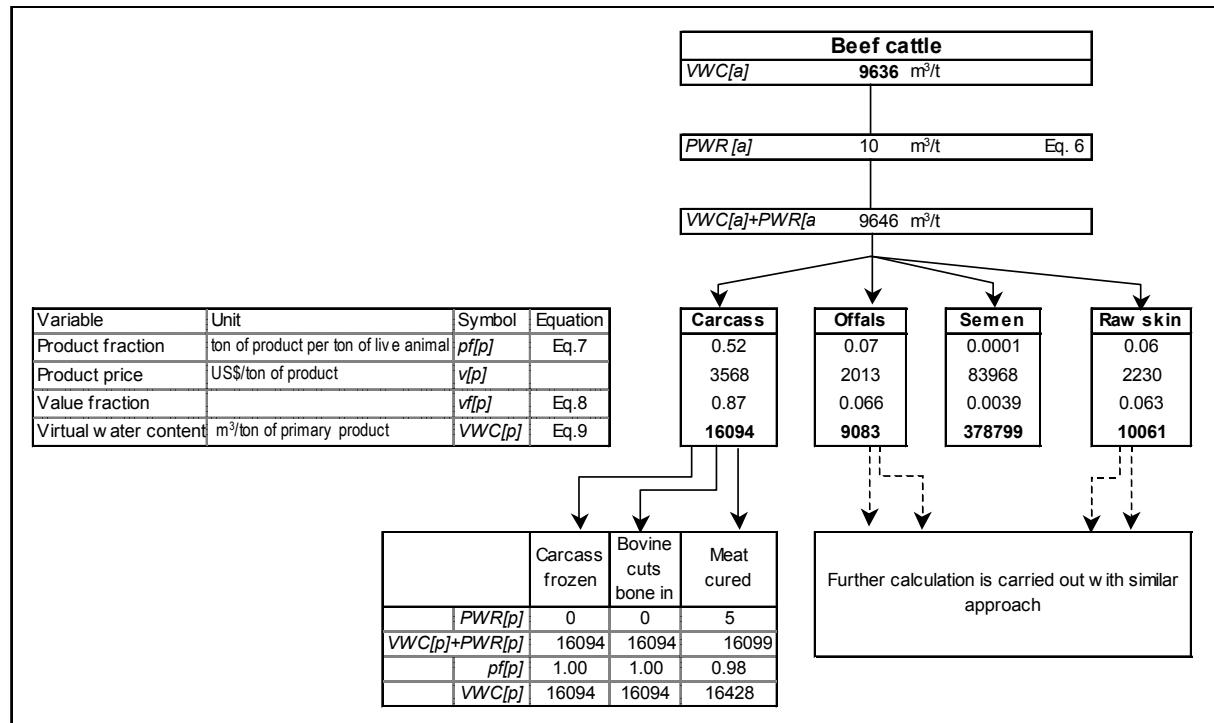

Figure 2.1. Schematic diagram of the calculation of virtual water content of products from beef cattle.

2.4. Calculation of virtual water flows between nations

For each country, the volumes of incoming and outgoing virtual water flows can be calculated by multiplying the product volumes traded with their respective virtual water content. In this study we focus on virtual water flows in relation to trade in livestock and livestock products. The various steps involved in the calculation of global virtual water flows are given in Figure 2.2.

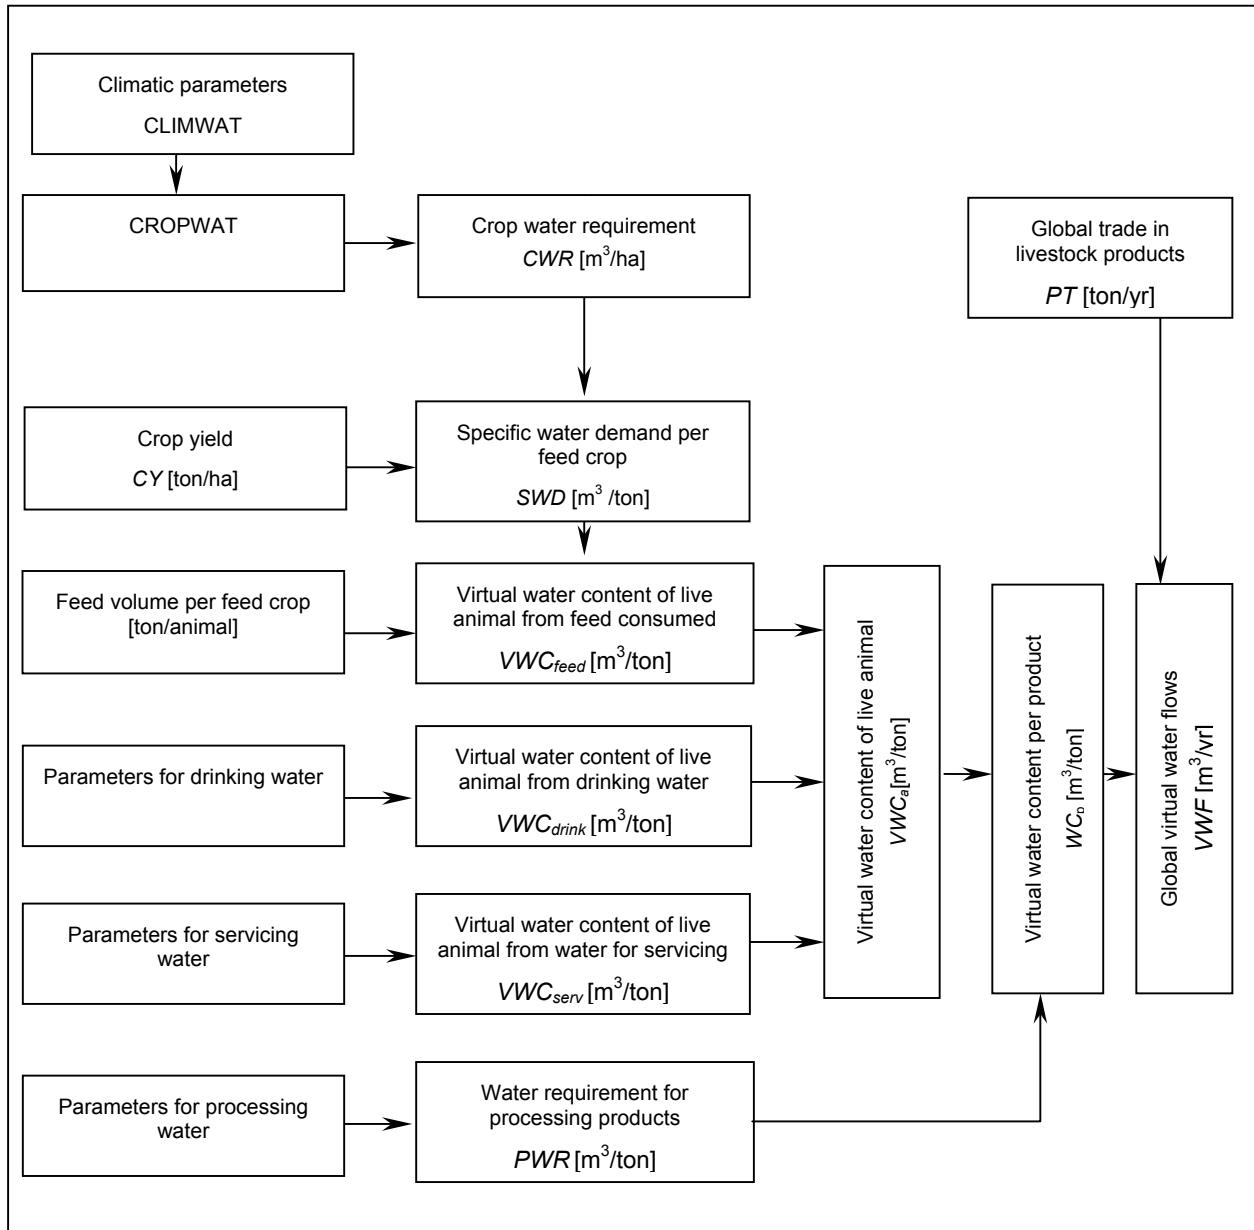

Figure 2.2. Steps in the calculation of global virtual water flows related to international trade in livestock and livestock products.

The virtual water flow VWF (m^3/yr) from exporting country e to importing country i in year t as a result of trade in livestock product p (ton/yr) can be represented as:

$$VWF[e, i, p, t] = PT[e, i, p, t] \times VWC_p[e, p] \quad (10)$$

Here, PT represents the livestock product trade (ton/yr) from exporting country e to importing country i in year t , while VWC_p is the virtual water content (m^3/ton) of livestock product p in the exporting country. The difference between total virtual water import and total virtual water export is the net virtual water balance of the country in the time period concerned. If the balance is positive it implies net virtual water being imported and if it is negative there is net export of virtual water.

2.5. Calculation of a nation's water footprint, water self-sufficiency and water dependency

The total water use within a country itself is not the correct measure of a nation's actual appropriation of the global water resources. In the case of net import of virtual water into a country, this virtual water volume should be added to the total water use within the country in order to get a picture of a nation's real call on the global resources. Similarly, in the case of net export of virtual water from a country, this should be subtracted from the volume of internal water use. The sum of volumes of water use in a country and net virtual water import can be seen as the 'water footprint' of a country. This concept is analogous to the 'ecological footprint' of a nation, a concept that refers to the amount of *land* needed for the production of the goods and services consumed by the inhabitants of a country. Studies have shown that for some countries the ecological footprint is smaller than the nation's total territory, while in other cases it is much bigger (Wackernagel and Rees, 1996; Wackernagel *et al.*, 1997). The latter means that some nations apparently need land outside their own territory to be able to provide all their goods and services.

The 'water footprint' of a country (expressed as volume of water per year) is defined as:

$$\text{Water footprint} = WU + NVWI \quad (11)$$

where WU denotes the total water use in a country (m^3/yr) and $NVWI$ the net virtual water import of a country (m^3/yr). As noted earlier, the latter could have a minus sign.

One would logically assume that a country with great water scarcity would seek to take advantage of net virtual water import. On the other hand, countries with abundant water resources could profit by exporting water in virtual form. To understand this more clearly we can use indices such as water scarcity, water dependency and water self-sufficiency.

As an index of national water scarcity we use the ratio of total water use to water availability:

$$WS = \frac{WU}{WA} \times 100 \quad (12)$$

In this equation, WS denotes national water scarcity (%), WU the total water use in the country (m^3/yr) and WA the national water availability (m^3/yr). Defined in this way, water scarcity will generally range between zero and a hundred per cent, but can in exceptional cases (e.g. groundwater mining) be above a hundred per cent. As a measure of the national water availability WA we take the average fresh water resources renewably available over a year (from precipitation falling within a country's borders and rivers flowing into the country). As noted in the previous section, total water use WU should ideally refer to the total of blue and green water use.

Next, we have to look for a proper indicator of ‘virtual water import dependency’ or ‘water dependency’ for short. The indicator should reflect the level to which a nation relies on foreign water resources (through import of water in virtual form). The water dependency WD of a nation is calculated as the ratio of the net virtual water import into a country to the total national water appropriation:

$$WD = \begin{cases} \frac{NVWI}{WU + NVWI} \times 100 & \text{if } NVWI \geq 0 \\ 0 & \text{if } NVWI < 0 \end{cases} \quad (13)$$

The value of the water dependency index will per definition vary between zero and a hundred per cent. A value of zero means that gross virtual water import and export are in balance or that there is net virtual water export. If at the other extreme the water dependency of a nation approaches a hundred percent, the nation is almost completely reliant on virtual water import.

As the counterpart of the water dependency index, the water self-sufficiency index is defined as follows:

$$WSS = \begin{cases} \frac{WU}{WU + NVWI} \times 100 & \text{if } NVWI \geq 0 \\ 100 & \text{if } NVWI < 0 \end{cases} \quad (14)$$

The water self-sufficiency of a nation relates to its water dependency in the following simple way:

$$WSS = 100 - WD \quad (15)$$

Self-sufficiency is a hundred per cent if all water needed is available and indeed taken from within the national territory. Water self-sufficiency approaches zero if a country relies heavily on virtual water imports.

3. Data sources

3.1. Global trade in livestock products

Data on global trade in livestock products are taken from the database produced by the United Nations Statistics Division (UNSD, 2001) in New York in collaboration with the International Trade Centre (ITC) in Geneva. These data are based on the Commodity Trade Statistics Data Base (COMTRADE) of the UNSD. Individual countries supply the UNSD with their annual international trade statistics, detailed by commodity and partner country. These data are processed into a standard format with consistent coding and valuation. The products are classified under the Harmonised System of Classification (HS). The data are available in the form of the CD-ROM ‘PC-TAS’ (Personal Computer Trade Analysis System). The database covers the period 1995 to 1999.

In PC-TAS each trade flow is expressed in both physical volume (e.g. ton/yr, number/yr, m²/yr) and trade value (US\$/yr). For some products the use of the unit to express physical trade volume for different countries is inconsistent, e.g. trade in skin is sometimes expressed in ton/yr and in other places in the database in m²/yr. Also, sometimes only trade value is given, not physical trade volume.

Where different units of physical trade volume are used, the data have been homogenised by converting the deviant unit into the more commonly used one. If data on physical trade volume are lacking, these have been estimated on the basis of the ratio of global physical trade volume to the global trade value of the product.

The PC-TAS database covers the international trade in livestock and its products under different product groups, as listed in Table 3.1.

Table 3.1. Relevant product groups in PC-TAS.

Group code	Product group
AA	Live animals
AB	Meat and edible offal, fresh, chilled, frozen
AC	Meat products
AG	Dairy products and eggs
AY	Products of animal origin, edible, not else specified
AZ	Products of animal origin, not edible, not else specified
HA	Hides and skins
HB	Leather and its products
HZ	Leather products, not else specified

The various products, their groups and their product codes as used in PC-TAS are listed in Appendix II. Appendix III presents per product the global trade volume in ton/yr and the global trade value in US\$/yr. It also

shows per product its contribution to the total global trade value. The shares of different product groups of the total global trade value are shown in Figure 3.1.

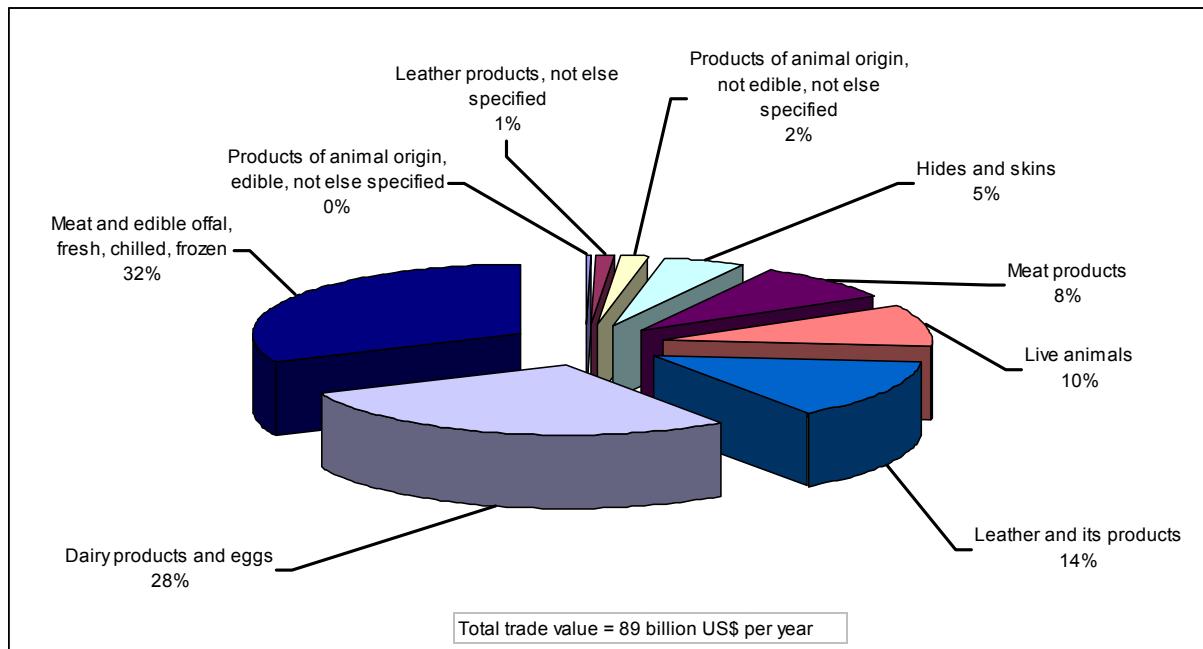

Figure 3.1. Total value of global trade in livestock and livestock products per product category (1995-99).

In this study the products categorised in PC-TAS have been re-grouped, based on the animals from which they come (Appendix IV). The various animal groups and their share of total global trade value are tabulated in Table 3.2 and shown in Figure 3.2. In a next step, the products in each animal group have been arranged in a product tree (Appendix V).

Table 3.2. The trade values of animal groups and their share in the total global trade (1995-99).

Animal group	Average trade value (billion US\$/yr)	Contribution to the total trade value (%)
Beef cattle	33.5	37.7
Dairy cows	23.6	26.6
Swine	15.1	17.0
Sheep	4.8	5.4
Goats	0.44	0.5
Poultry and Fowls	2.1	2.4
Laying hens	1.4	1.5
Horses	1.5	1.7
Others	6.3	7.1
Total	88.8	100.0

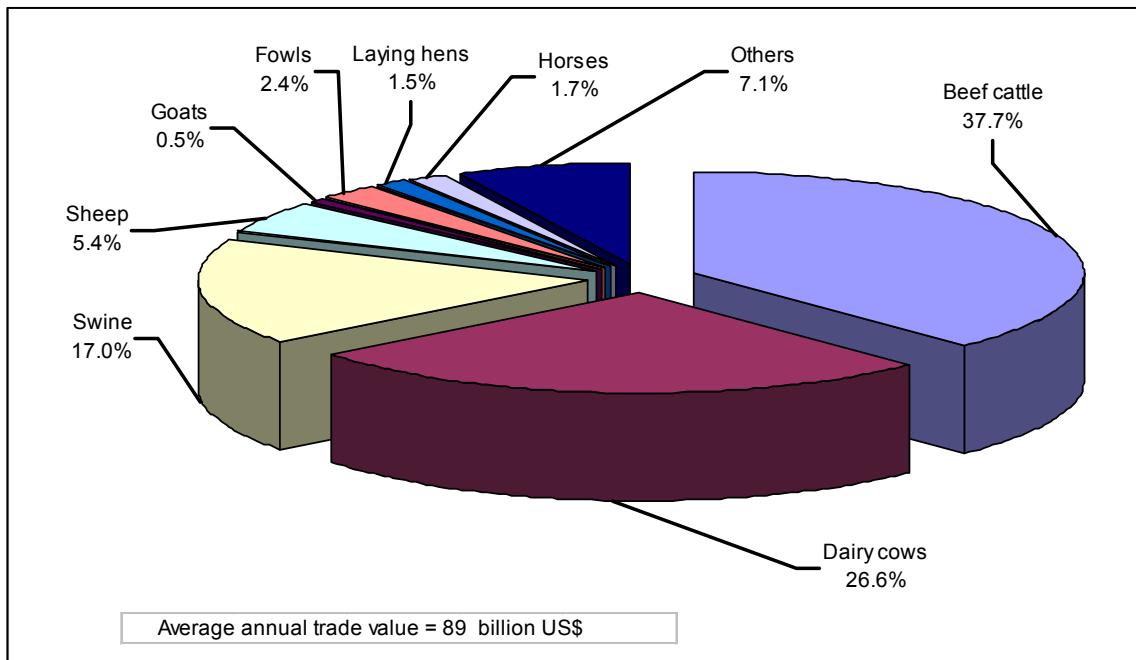

Figure 3.2. Total value of global trade in livestock products per animal category (1995 to 1999).

3.2. Farming systems

Animal production parameters such as feed composition, drinking and service water volumes, product yields and so on depend on the type of farming system. For that reason, we need to distinguish a limited number of farming systems to be used in this study.

FAO (1995) distinguishes between three major types of farming systems: grazing systems, mixed systems and industrial systems. The grazing systems have low stocking rates, generally fewer than 10 livestock units per hectare of agriculture land. In the mixed systems livestock farming is combined with crop farming, where (part of) the crop (by-) products are used as feed for the animals. In the industrial systems there are average stocking rates of more than 10 livestock units per hectare of agricultural land and less than 10 per cent of the dry matter fed to livestock is produced on the farm (FAO, 2000).

In terms of total production, grazing systems supply only 9 per cent of global meat production (FAO, 1995). Globally, mixed farming systems have the largest share of total meat (54 per cent) and milk (90 per cent) production and mixed farming is the main system for smallholder farmers in many developing countries (FAO, 1995). Industrial systems supply more than 50 per cent of the global pork and poultry meat and 10 per cent of beef and mutton (FAO, 1995).

Although the definitions imply distinct systems, current pressures on livestock production result in a blurring of the boundaries between one system and another, e.g. mixed systems which use external feed may become indistinguishable from industrial systems. The average values of various animal production parameters for relevant kinds of animal are given in Table 3.3. The table shows values for the industrial and grazing systems

only. Values for the mixed system are assumed to be average of the values for the industrial and grazing systems. The definitions for the terminology pertinent to livestock and its products, such as dressed weight, carcass, offal, live weight etc., are adapted from the FAO (2002c).

Table 3.3. Animal production parameters for industrial and grazing systems.

Animal	Parameter	Industrial system	Grazing system
Beef cattle	Cows at slaughter (age in month)	36	36
	Live weight of animal at slaughter (ton)	0.55	0.40
Dairy cattle	Calves (age in yr.)	0-1	0-1
	Heifers (age in yr.)	1-3	1-3
	Milking cows (age in yr.)	3-10	3-10
	Milk production during lactation (kg/yr)	7400	2500
	Number of lactations	7	7
	Live weight of animal at slaughter (ton)	0.45	0.27
Swine	Adult (age in months)	10	12
	Live weight of animal at slaughter (ton)	0.118	0.090
Sheep	Adult (age in months)	18	24
	Live weight of animal at slaughter (ton)	0.053	0.04
Goats	Adult (age in months)	24	30
	Live weight of animal at slaughter (ton)	0.040	0.035
Broiler chickens	Slaughter age (weeks)	10	15
	Live weight (kg)	2.20	1.80
Laying hens	Start of laying eggs (week)	22	25
	Slaughter age (week)	75	75
	Egg production (number/yr)	300	120
	Live weight (kg)	2.00	1.50
	Weight of eggs (gram)	50	35
Horses	Foal (age in month)	1	1
	Mature horses (age in month)	24	24
	Live weight of animal at slaughter (ton)	0.40	0.40

Sources: WUR (2002), FAO (2002a), USDA (1998; 2002c).

In this study we presuppose a crude relationship between gross national income (GNI) per capita and the three different farming systems. For countries with high GNI per capita the industrial farming system is assumed to be dominant, for countries with low GNI per capita the grazing system is dominant, and for the countries with average GNI per capita, the mixed farming system is assumed to be dominant (Table 3.4). The data on GNI per capita are taken from World Bank (2002). Country groups based on average gross national income per capita (1997-2000) are listed in Appendix VII.

Table 3.4. Assumed dominant farming system based on average gross national income per capita.

Gross national income per capita (US\$/yr/capita)	Dominant farming system (assumed)
< 1200	Grazing system
>1200 and <17000	Mixed system
> 17000	Industrial system

3.3. Feed composition by kind of animal

The feed data for the different livestock farming systems are generally available in terms of nutrient value. The composition of the feed, the diet of the animal, can differ, although the nutritional value is the same. The web publication of the ‘Canada Statistics Division’ (Statistics Canada, 2002) is used as the feed data source for the industrial livestock system. Feed data for mixed and grazing production systems are available for only a few kinds of animal in the form of some specific case studies.

The daily feed requirement of an animal depends upon a number of variables, such as breed, weight, farming system, ambient temperature, etc. We can assume that the weight is dependent upon the breed. The World Watch List for Domestic Animal Diversity (FAO, 2002a) lists 6,379 breeds. It is not within the scope of the present study to analyse each individual breed per country. Here it is assumed that breeds with high production are used in the industrial farming system and local and indigenous breeds in the grazing system. The mixed system is assumed to have an equal mix of both categories. The major variable in this case is the farming system.

The feed data are available as an average value of feed for different age groups per animal. It is assumed that a linear relationship exists between the feed volumes and the age until adulthood, as shown in Figure 3.3.

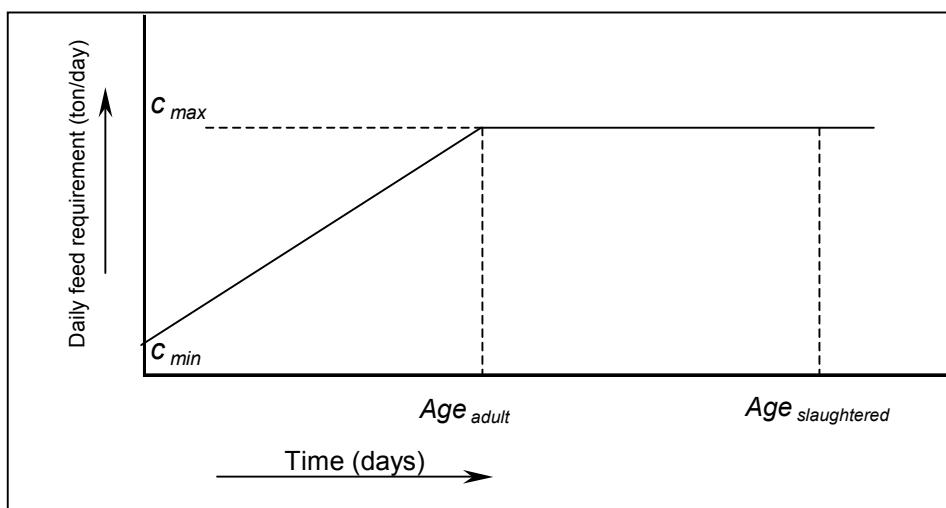

Figure 3.3. Feed requirement curves for different age groups of an animal.

The daily feed consumption is calculated as:

For Age <Age_{adult}:

$$C[e, a, c] = \left(\frac{C_{\max}[e, a, c] - C_{\min}[e, a, c]}{Age_{\text{adult}}[e, a]} \right) \times Age + C_{\min}[e, a, c] \quad (16)$$

For Age >Age_{adult}:

$$C[e, a, c] = C_{\max}[e, a, c] \quad (17)$$

where $C[e, a, c]$ is quantity of crop c in the daily feed composition of animal a in exporting country e . $C_{\max}[a, e, c]$ and $C_{\min}[e, a, c]$ are the quantity of crop c in the feed composition of an adult and a baby animal respectively.

The feed data for industrial livestock systems is taken from the study of Canadian feed requirements conducted by Statistics Canada (Table 3.5).

Table 3.5. Feed composition for different animals in industrial systems (data in ton/yr).

Animal	Wheat	Oats	Barley	Other small grains	Grain corn	Dry peas	Soya bean meal	Canola meal	Mill screen	Non grain portion	Pasture	Dry hay	Silage	Other roughages

The data on feed composition for different animal groups in grazing livestock systems are not available from one single source. Data on daily feed crop and its quantity have to be collected from different sources for different animals and their major breeds. The averages are taken from the most often quoted ranges in the data for major breeds and tabulated in Table 3.6.

Table 3.6. Feed composition for different animals in grazing systems (data in ton/yr).

Animal	Wheat	Oats	Barley	Other small grains	Grain corn	Dry peas	Soya bean meal	Canola meal	Mill screen	Non grain portion	Pasture	Dry hay	Silage	Other roughages

Sources: USDA (1998, 2002a, 2002b, 2002d), FAO (1987, 2002b), Haan (1998), Blackburn (1998), Anderson (2002), Boleman et al.(2001), Pirelli et al.(2000), Paris(2002).

The specific water demands (*SWD*) for different crops can be calculated for major crops using CROPWAT of the FAO. The climate data set required for the CROPWAT model is obtained from the FAO's CLIMWAT database. But CLIMWAT does not cover the climate data for the entire world (for example, it does not cover the North American countries). For countries where required climatic input data are not available in CLIMWAT, crop water requirements have been taken equal to the guideline of FAO as reported by Gleick (1993). If there are a number of climate stations within a country, the data are taken from the station in its capital. This assumption generalises data over a wide range and the climate station in the capital may not reflect the area where the main part of the crops are grown. CROPWAT uses different crop-coefficients K_c for different crops. In this model, the growing season and the starting date of crop plantation are to be selected by the user.

For the present study, the specific water demands per crop type per country are taken from Hoekstra and Hung (2002), a study that covers a wide range of crops grown and traded worldwide. The global average specific water demands of feed crops are presented in Table 3.7.

Table 3.7. Global average specific water demand of some feed crops¹ (m³/ton).

Barley	Bean dry	Maize	Millet	Oats	Potato	Sorghum	Soybean	Sweet potato	Vegetables	Wheat
1057	3171	463	3032	1960	161	924	1716	468	431	1109

¹ Based on country data in Hoekstra and Hung (2002). Country data have been weighted based on their share in global virtual water export per crop type.

Some of the feed crops, such as ‘forage’ and ‘pasture’ are not covered in the study and it is therefore necessary to calculate the specific water demand for these feeds using the method described in Section 2.2.2. The average specific water demand for pasture in a tropical climate is estimated as 445 m³/ton and this is provisionally

assumed to represent the global average. The volume of water required to prepare the feed mix is assumed to be 50 per cent of the total volume of grain in feed for all kinds of animal.

3.4. Drinking water requirement

The drinking water requirement q_d depends on variables such as breed, age, weight, farming system, ambient temperature, etc. For each kind of animal the data for the daily drinking water requirement during the animal's entire life span have to be collected as a function of the farming system and the temperature zone. Demand curves of such a nature for different breeds in different temperatures and farming systems are not available.

It is assumed here that the demand increases linearly with age and becomes constant after the animal reaches adulthood (Figure 3.4). Equations 18 and 19 give the daily drinking water requirement of an animal.

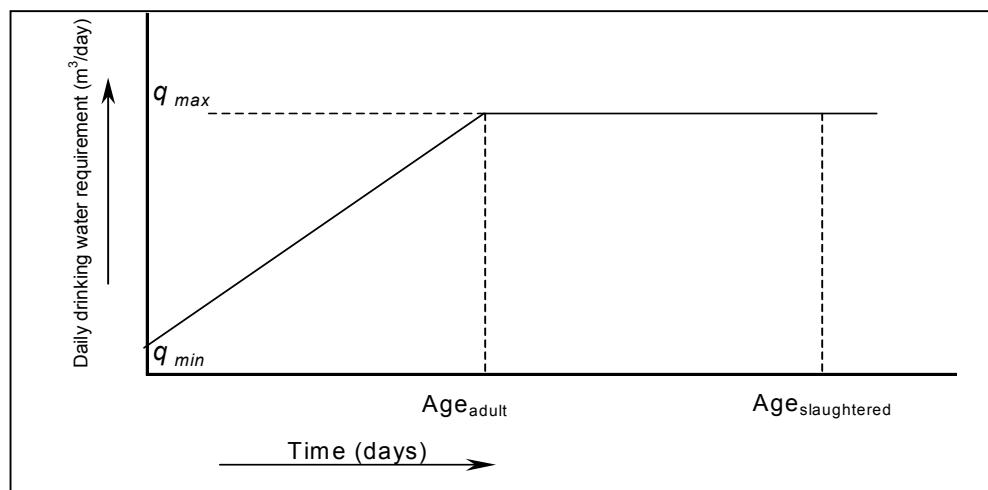

Figure 3.4. Simplified drinking water function.

For $\text{Age} < \text{Age}_{\text{adult}}$:

$$q_d[e, a] = \left(\frac{q_{\max}[e, a] - q_{\min}[e, a]}{\text{Age}_{\text{adult}}} \right) \times \text{Age} + q_{\min}[e, a] \quad (18)$$

For $\text{Age} > \text{Age}_{\text{adult}}$:

$$q_d[e, a] = q_{\max}[e, a] \quad (19)$$

Here $q_d[e, a]$ is the daily drinking water requirement of animal a in exporting country e . $q_{\max}[e, a]$ and $q_{\min}[e, a]$ are the average daily drinking water requirements of an adult and a baby animal respectively. $\text{Age}_{\text{adult}}$ is the age of an animal in days when adult.

The daily drinking water requirements for different breeds of different animals are available in various sources. There is a wide variation in the data in these sources, maybe due to differences in the environment and other variables, which are not clearly stated in most of the reports. The data sets presented are not always complete and sometimes no data are available for different temperature zones, age groups or different farming systems.

The data on daily drinking water for different animals and their main breeds are collected from these sources and average values are calculated from the most often quoted ranges for the main breeds (Table 3.7). For the mixed farming system we have taken the average of the other two systems.

Table 3.8. Drinking water requirement for different animals in different farming systems (litre/animal /day)¹.

Animal	Age group	Drinking water requirement	
		Industrial system	Grazing system
Beef cattle	Young calves	5	5
	Adult cows	38	22
Dairy cattle ²	Calves, 0-1 yr	5-23	4-18
	Heifers, 1-3 yr	26-70	18-30
	Milking cows, 3-10 yr	70	40
Swine	Piglet	1.8	1.8
	Adult	14	8
Sheep	5lbs lamb	0.38	0.30
	Adult	7.6	6.0
Goats	5lbs kid	0.38	0.30
	Adult	3.8	3.5
Broiler chicken	Chick	0.02	0.02
	Adult	0.18	0.18
Laying hens	Chick	0.02	0.02
	Laying eggs	0.30	0.30
Horses	Foal	3	3
	Mature horse	45	45

¹ Sources: Pallas (1986), Irwin (1992), Alberta (1996, 2000), AAFC (2000), Gregorica (2000), Jermar (1987), Kammerer (1982), Kollar and MacAuley (1980), US-AEP (2002), World Bank (1996), NCDENR (2002), NDSU (1992), UMCE (2002) and Looper and Waldner (2000).

² The demands for drinking and service water are different in the dry periods between two lactation periods, but in this study we have taken the demands as constant for adult cows.

3.5. Service water requirement

There is very little literature on the water requirement for the servicing. Some sources simply cover this under drinking water requirements, and there are not enough data on all the countries and different animals. We have primarily used data from Alberta (1996) and Jermar (1987). Average values have been taken wherever possible and if there were no data at all a simple reasonable guess has been made. The results are presented in Table 3.8.

Table 3.9. Service water requirement for different animals in different farming systems (litre/animal/day).

Animal	Age group	Service water requirement	
		Industrial system	Grazing system
Beef cattle	Young calves	2	0
	Adult cows	11	5
Dairy cattle	Calves, 0-1 yr	0	0
	Heifers, 1-3 yr	11	4
	Milking cows, 3-10 yr	22	5
Swine	Piglet	5	0
	Adult	50	25
Sheep	5lbs lamb	2	0
	Adult	5	5
Goats	5lbs kid	0	0
	Adult	5	5
Broiler chicken	Chick	0.01	0.01
	Adult	0.09	0.09
Laying hen	Chick	0.01	0.01
	Laying eggs	0.15	0.15
Horses	Foal	0	5
	Mature horses	5	5

Sources: Alberta (1996), Jermar (1987).

3.6. Processing water requirement

For any specific product the processing water requirement is more or less the same across different countries. There are minor variations, based on the efficiency of water use depending on recycling percentage, cooling processes, etc. As the processing water is only a small part of the virtual water content of a livestock product, it will not affect the end results of the study if we assume one constant value for a specific product across the globe. The data are collected from various sources (Kollar and MacAuley, 1980; Kammerer, 1982; Twort *et al.* 2000; Van der Leeden *et al.*, 1990; NCDENR, 2002; World Bank, 1996) and are listed in Appendix VI.

3.7. Product fractions and value fractions of livestock products

The product fraction for a primary product is largely dependent upon the breed of an animal. The product fractions of secondary and tertiary products are less dependent upon the breed of the animal. The animal production parameters (live weight, milk production, egg production and dressed weight etc.) for different kinds of animals are presented in Table 3.3. We have assumed a constant set of product fractions pf and value fractions vf for secondary and tertiary products across the globe (Appendix VI).

The product fractions for various livestock products are determined by using commodity trees as defined in FAO (2003c) and production data from other sources. Based on average world market price (Appendix VIII) the value fraction vf for each product is calculated using Equation 8 and the results are presented in Appendix VI. The virtual water content of a product is directly proportional to its vf and inversely proportional to its pf .

4. Virtual water content per livestock product per country

4.1. Virtual water content of a live animal by kind of animal and by country

The full calculation of the virtual water content of a live animal for each animal category is shown for the example of Canada in Appendix IX. The virtual water contents of live animals have been calculated for all countries of the world and are presented in Appendix X.

Farming system and climate are the most important factors determining the virtual water content of a live animal. Table 4.1 shows that the animals grown in industrial farming systems are generally more water efficient than others. Animals grown in the grazing system have generally high virtual water content, because these animals have generally longer life span and less production. The mixed system is often in between the other two systems, but not in all cases. This is due to the fact that the presented figures for these systems not only reflect the physical characteristic of the systems, but also the dominant climate where the systems are located.

Table 4.1. Global average virtual water content of different live animals for each of the three farming systems in m³/ton at slaughter age.

	Virtual water content of a live animal (m ³ /ton)							
	Beef cattle	Dairy cows	Swine	Sheep	Goats	Poultry/ Fowls	Laying hens	Horses
Grazing system*	13824	159523	2709	6435	6692	7702	38519	5600
Mixed system*	11857	121099	4344	5817	5499	2695	15422	5396
Industrial system*	8999	85955	2415	6074	2896	1028	7241	5524
World average	9678	94642	2819	6049	5234	1498	9529	5455

* The data are weighted based on the total volume of water traded per live animal per farming system.

The virtual water content of different live animals for a few selected countries which are most relevant in the context of international trade in livestock (products) are presented in Tables 4.2 (m³/animal) and 4.3 (m³/ton). Although the virtual water content of a dairy cow is very high if compared to a beef cow, it has higher water productivity (in terms of dollar production per unit of water) than a beef cow. This is because a dairy cow produces milk during its productive life span and finally meat after slaughter. Similarly a laying hen produces eggs while it grows and meat at the end of its productive life span. The virtual water content (per ton) of beef cattle is roughly 6 to 7 times higher than a broiler chicken (poultry). It implies that a diet with white meat from a broiler chicken is more water efficient than a diet with red meat from a beef cow. Swine is second most water efficient in terms of water use per ton of meat production (Table 4.3).

It should be noted that the virtual water content of live animals refers to the virtual water content of the animals at the end of their average lifetime under current production conditions. This is of course shorter than the natural lifetime. It should further be noted that if one were to consider the virtual water content of the average animal being traded, the figures presented here are overestimates, because not all traded animals are ‘mature’.

Table 4.2. Virtual water content of different live animals at slaughter age for selected countries in m³/animal.

² The country data are weighted based on the total volume of water traded per animal per country.

4.2. Virtual water content per livestock product by country

The virtual water content of bovine meat is relatively high if compared to the virtual water content of pork, goat and chicken meat. Beef requires in average 22 m³/kg (with difference of course over the various countries and specific meat categories). Pork takes in average 3.5 m³/kg, goat meat 6 m³/kg, sheep meat 9 m³/kg, horse meat 8

m^3/kg and chicken meat $2.3 \text{ m}^3/\text{kg}$. Milk has a virtual water content of about $0.8 \text{ m}^3/\text{litre}$, while cheese has a virtual water content of $4.6 \text{ m}^3/\text{kg}$. In average 1 kg of eggs contain 2 m^3 of virtual water. The virtual water content of each livestock product per country is shown in Appendix XI. The virtual water content of some of the main livestock products from selected countries is given in Table 4.4. One should obviously be aware that the virtual water content continues to increase with each level of processing, and that the production factor pf (ratio of weight of a product to the weight of its resource material) has a direct effect on the virtual water content of a livestock product.

Table 4.4. Virtual water content (m^3/ton) of some of the main livestock products for selected countries.

* World averages for livestock products have been calculated as the ratio of total product trade volume to the global virtual water trade volume for the product concerned.

5. International virtual water flows related to the trade in livestock and livestock products

5.1. International virtual water flows

The global volume of international virtual water flows during the period 1995-99 in relation to the trade in livestock and livestock products was 336 Gm³/yr. The volumes are comparable in the separate years (Table 5.1).

Table 5.1. Global volume of international virtual water flows during 1995-99 (insofar related to trade in livestock and livestock products).

Year	Virtual water flows Gm ³ per year
1995	314
1996	332
1997	354
1998	341
1999	337
Average	336

Products from beef cattle have the largest share of the global flows in virtual water (69 per cent), followed by dairy cow products (11 per cent), swine products (6.5 per cent) and sheep products (4 per cent). The trade by animal category is shown in Figure 5.1.

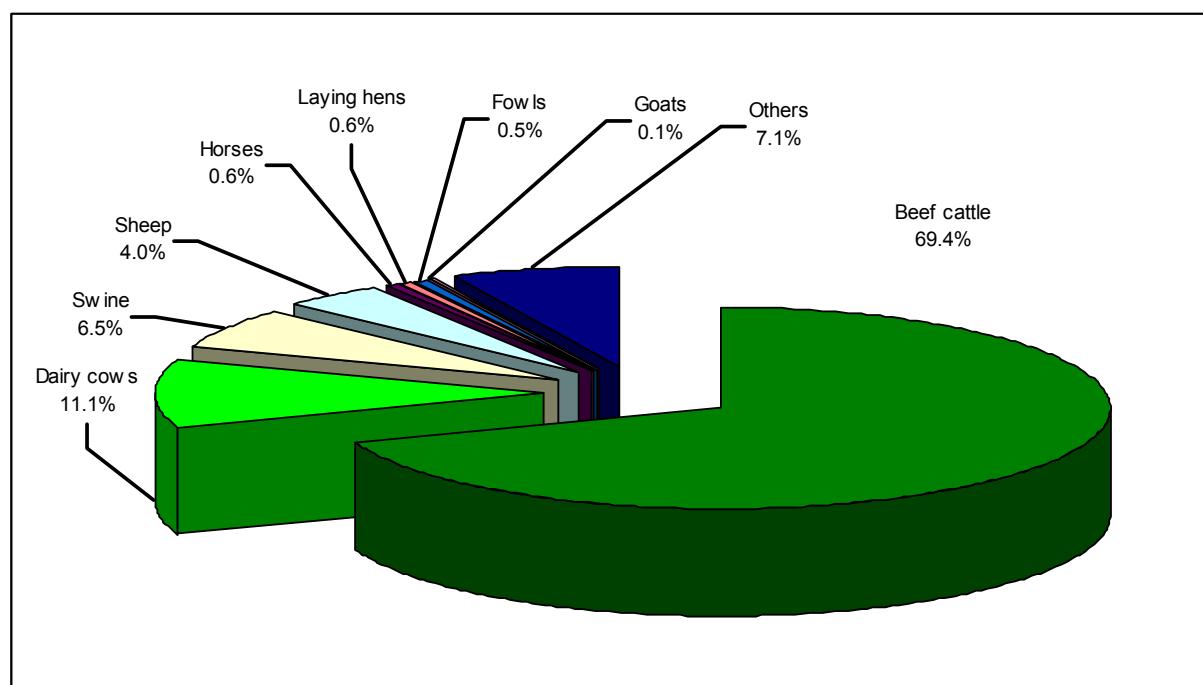

Figure 5.1. Global virtual water flows by animal category (1995-99).

The main products, which contributed more than 1 per cent to the global virtual water flows in the period 1995-99, are shown in Table 5.2. A complete list of virtual water flows by product is presented in Appendix XII.

Table 5.2. Livestock products contributing more than 1 per cent to global virtual water flows (1995-99).

Product	Gross virtual water trade (Gm ³ /yr)	Contribution to the total trade (%)
Bovine cuts boneless, frozen	54.0	16.1
Bovine and equine leather, tanned or retanned, not else specified	41.3	12.3
Bovine cuts boneless, fresh or chilled	26.1	7.8
Bovine, live except pure-bred breeding	20.5	6.1
Bovine hides, whole, fresh or wet-salted	20.1	6.0
Bovine leather, otherwise pre-tanned, not else specified	14.1	4.2
Bovine cuts bone in, fresh or chilled	13.1	3.9
Cheese not else specified	9.6	2.9

Bovine meat and meat offal not else specified, excluding livers, prepared or preserved	6.4	1.9
Swine cuts, frozen not else specified	5.6	1.7
Sausage & similar products of meat, meat offal / blood & food prepared based on these products	5.3	1.6
Bovine carcasses and half carcasses, fresh or chilled	4.8	1.4
Bovine cuts bone in, frozen	4.0	1.2
Bovine edible offal, frozen, not else specified	3.8	1.1
Bovine and equine leather, not else specified	3.8	1.1
Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat	3.6	1.1
Guts, bladders and stomachs of animals except fish whole or in pieces	3.5	1.0
Sheep, live	3.3	1.0
Swine cuts, fresh or chilled, not else specified	3.3	1.0
All other products	68	20.3
Global virtual water trade	336	100.0

The export and the import of virtual water during the period 1995-99 have been calculated for each country and are shown in Appendix XIII and XIV respectively. The virtual water balance is arrived at by subtracting the export volume from the import volume for each country. The complete list of net virtual water imports is given in Appendix XV. The top twenty net exporter and net importer countries for the period 1995-99 are listed in Table 5.3.

Table 5.3. Top twenty net virtual water exporters and importers (1995-99).

Exporter countries	Net export volume (Gm ³ /yr)	Rank	Importer countries	Net import volume (Gm ³ /yr)
Australia	38.8	1	Japan	28.9
USA	30.6	2	Italy	24.0
New Zealand	20.4	3	Hong Kong	16.6
Canada	11.3	4	South Korea	13.4
Argentina	10.7	5	Taiwan	10.7
Ireland	8.2	6	Russian Federation	8.9
Brazil	7.2	7	United Kingdom	5.1
Uruguay	6.4	8	Indonesia	4.9
Denmark	5.8	9	Mexico	4.3
France	4.9	10	Philippines	3.8
Netherlands	4.0	11	Portugal	3.5
India	3.8	12	Egypt	2.9
Belgium-Luxembourg	3.7	13	Greece	2.6
Poland	2.4	14	United Arab Emirates	2.5
Sri Lanka	2.0	15	Malaysia	2.3
Austria	1.5	16	Saudi Arabia	2.3
Lithuania	1.1	17	Chile	2.2
Hungary	1.0	18	Singapore	2.1
Germany	0.9	19	Turkey	1.5
Nicaragua	0.9	20	Israel	1.5

The table shows the ranking in *net* import or export. If we look at *gross* export of virtual water, the top seven exporting countries are: USA (67.6 Gm³/yr), Australia (39.8 Gm³/yr), New Zealand (20.7 Gm³/yr), Canada (18.3 Gm³/yr), Germany (17.4 Gm³/yr), France (17.4 Gm³/yr) and the Netherlands (15.0 Gm³/yr). Although the USA is the largest gross exporter, it is in second position in the net exporters list. The reason for this is that the USA is the world's largest gross importer as well. The top seven gross importing countries are: USA (37.0 Gm³/yr), Italy (34.1 Gm³/yr), Japan (30.1 Gm³/yr), South Korea (17.8 Gm³/yr), Hong Kong (17.2 Gm³/yr), Germany (16.4 Gm³/yr), and France (12.5 Gm³/yr).

There are 68 countries exporting more than 100 million cubic metres of virtual water related to trade in livestock and livestock products annually, and 118 countries which import more than 100 million cubic metres. Only 43 countries have net export and the rest of the countries in the world, a much larger number, have net import. This clearly shows that the market is characterised by a relatively small number of big exporters and a large number of importers.

According to a recent study about the virtual water flows into and from Japan (Oki *et al.*, 2003), the total virtual water balance of this country is 22.3 Gm³ per year. The study has taken only a selected number of livestock products and the net virtual water import into Japan is slightly lower than that of the present study. In the study

made by Oki *et al.*, they have used constant virtual water content for each animal in different countries across the globe. This may be one of the reasons behind the conservative result of the study. Table 5.4 provides a comparison between the results of the current study and the results of Oki *et al.* (2003) for the most important exporters to Japan.

Table 5.4. Net virtual water import by Japan related to the trade in livestock and livestock products.

Exporting countries	Net import (Gm ³ /yr)	
	Oki <i>et al.</i> (2003) (Period 1998-99)	Present study (Period 1995-99)
USA	9.5	13.8
Australia	5.4	10.3
Canada	1.0	0.7
Others	6.4	4.1
Grand total	22.3	28.9

The virtual water balance for each country is given in Appendix XV. The results are shown in Figure 5.2, with red for net importers and green for net exporters.

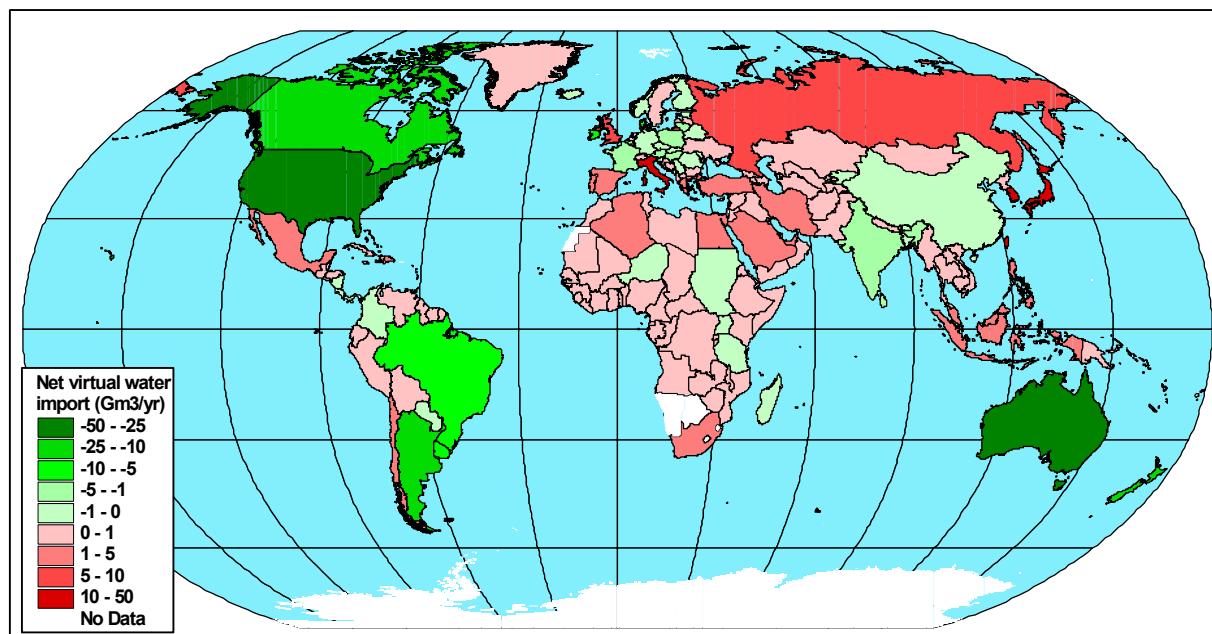

Figure 5.2. National virtual water balances related to trade in livestock and livestock products. Period: 1995-99. Green indicates net export, red net import.

5.2. Inter-regional virtual water flows

5.2.1. Sources and sinks of virtual water

To visualise the flows of virtual water in a more aggregated form, the world has been divided into thirteen regions: North America, Central America, South America, Eastern Europe, Western Europe, Central and South Asia, the Middle East, South-east Asia, North Africa, Central Africa, Southern Africa, the former Soviet Union and Oceania. A list of countries in each world region is given in Appendix XVI.

The average annual gross virtual water flows between and within regions in the period 1995-99 are presented in Table 5.5. The details of the regional flows are given in Appendix XVII. Net virtual water flows between regions in the period 1995-99 are presented in Table 5.6 and Figure 5.3. The figure only shows the flows greater than 2 Gm³/yr.

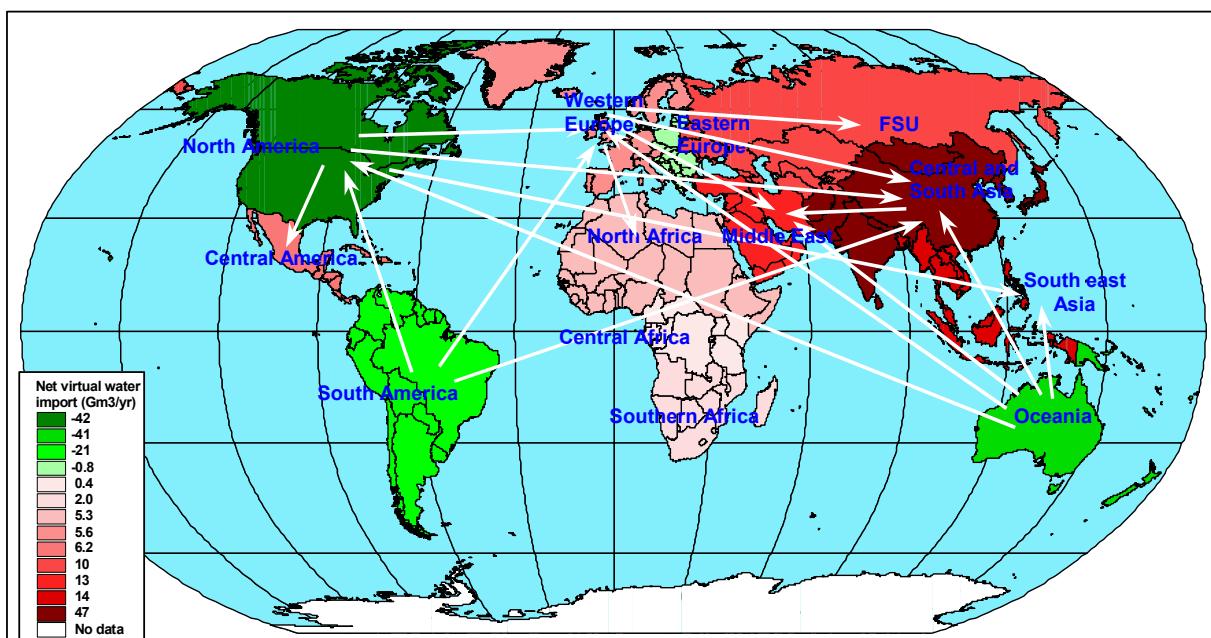

Figure 5.3. Virtual water balances related to the trade in livestock and livestock products of thirteen world regions. Period: 1995-99. Green coloured regions have net virtual water export; red coloured ones net virtual water import. The arrows show the net virtual water flows of more than 2 Gm³ per year between regions.

Table 5.5. Gross virtual water flows between world regions in the period 1995-99 ($10^6 \text{ m}^3/\text{yr}$). The shaded cells refer to virtual water flows between countries within the regions.

5.2.2. Virtual water balance per world region

The gross virtual water imports and exports of the thirteen world regions are shown in Figure 5.4. From this figure we can easily see that four regions (Central and South Asia, North America, Oceania and Western Europe) dominate the picture of inter regional virtual water flows related to the trade in livestock and livestock products. Western Europe has a large gross export, but it is not a net exporter as it has an even larger gross import.

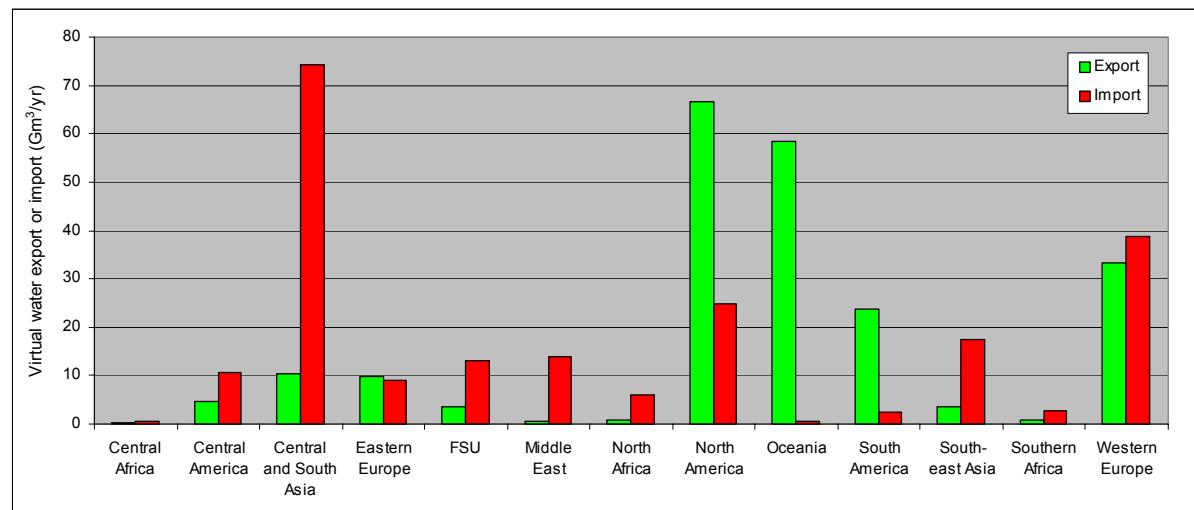

Figure 5.4. Gross virtual water import and export per region in the period 1995-99 (Gm³/yr).

Figure 5.5 shows the net virtual water balance as the difference between gross import and gross export of a region. Regions with significant net virtual water import are Central and South Asia, the Middle East, South-east Asia and the former Soviet Union. Four other regions have net virtual water import, but less substantial: North Africa, Central America, Western Europe, Southern Africa and Central Africa. Regions with substantial net virtual water export are North America, Oceania, and South America. Eastern Europe is a less substantial exporter.

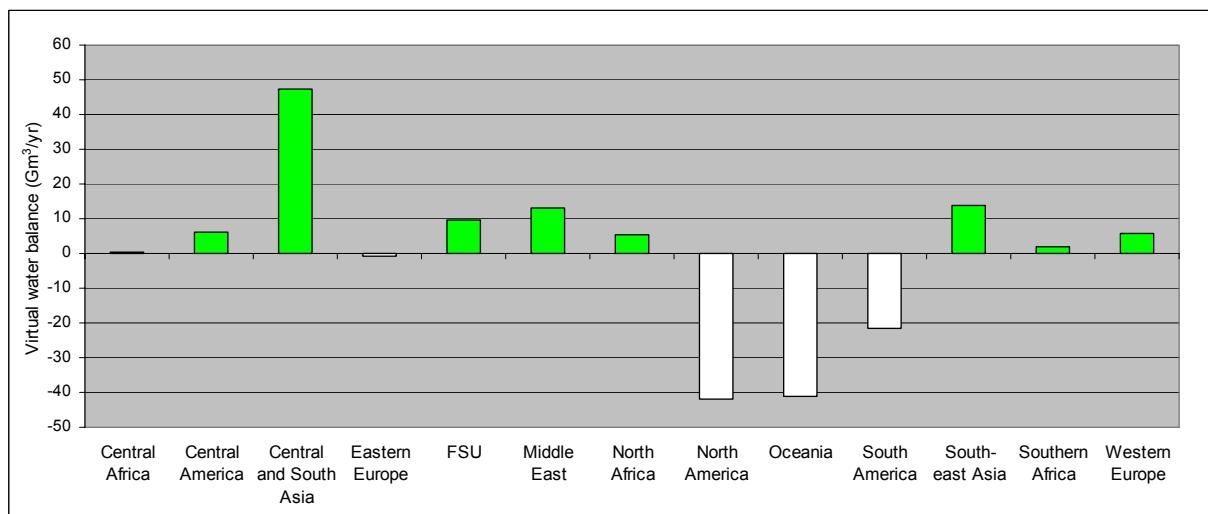

Figure 5.5. Virtual water balance per world region in the period 1995-99 (Gm³/yr).

The thirteen world regions have been ranked by their virtual water balance in Table 5.7. North America and Oceania are by far the biggest net virtual water exporters in the world, while Central and South Asia is by far the biggest net importer. We are still talking about virtual water flows in relation to trade in livestock and livestock products only!

Table 5.7. Ranking of regions in terms of their virtual water balance related to trade in livestock products in the period 1995-99.

Rank	Region	Virtual water balance (Gm ³ /yr) (gross import minus gross export)
1	North America	-41.87
2	Oceania	-41.29
3	South America	-21.35
4	Eastern Europe	-0.83
5	Central Africa	0.44
6	Southern Africa	2.01
7	North Africa	5.35
8	Western Europe	5.61
9	Central America	6.16
10	Former Soviet Union (FSU)	9.64
11	Middle East	13.16
12	South-east Asia	13.93
13	Central and South Asia	47.23

5.2.3. Gross virtual water flows between countries within regions

The volume of gross virtual water flows between countries within a region is the measure of their interdependency. The volume of international virtual water flows within a region is calculated by adding up the virtual water imports by countries from the other countries in the same region. Annual virtual water flows between countries within each of the thirteen world regions during the period 1995-99 are shown in Figure 5.6.

Western Europe has the largest internal flows of virtual water (69.6 Gm³ per year). North America, with 19.3 Gm³ per year, is in the second place.

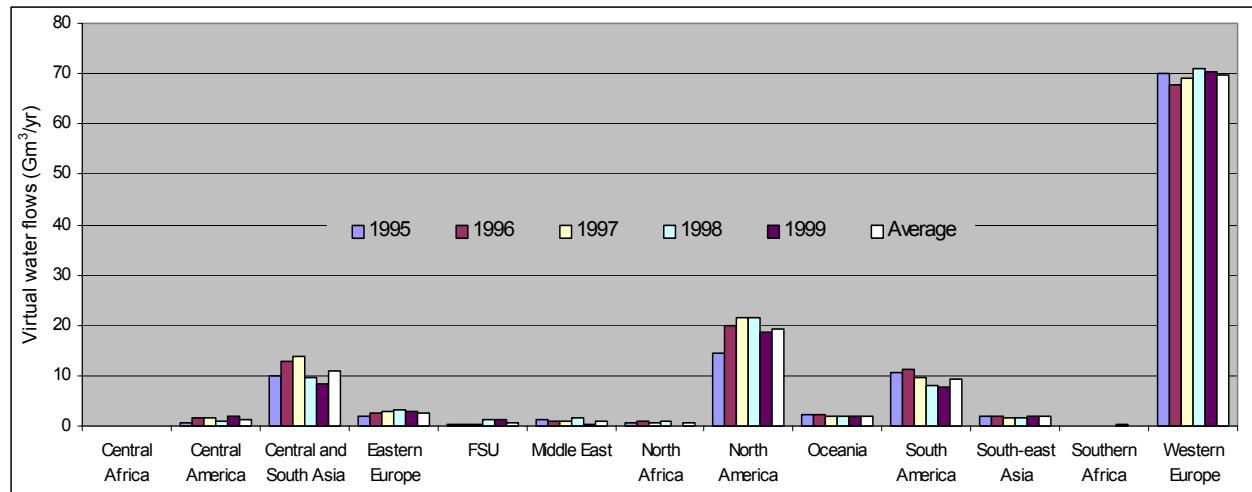

Figure 5.6. Gross virtual water flows between countries within each region in the years 1995-99 (Gm³/yr).

6. Global virtual water flows: the complete picture

6.1. International virtual water flows related to international trade in crops

We summarise here the assessment of global virtual water flows related to international trade in crops as carried out by Hoekstra and Hung (2002, 2003). The global volume of these virtual water flows averages $695 \text{ Gm}^3/\text{yr}$ in the period 1995-99. Average national virtual water balances during this period are shown in Figure 6.1.

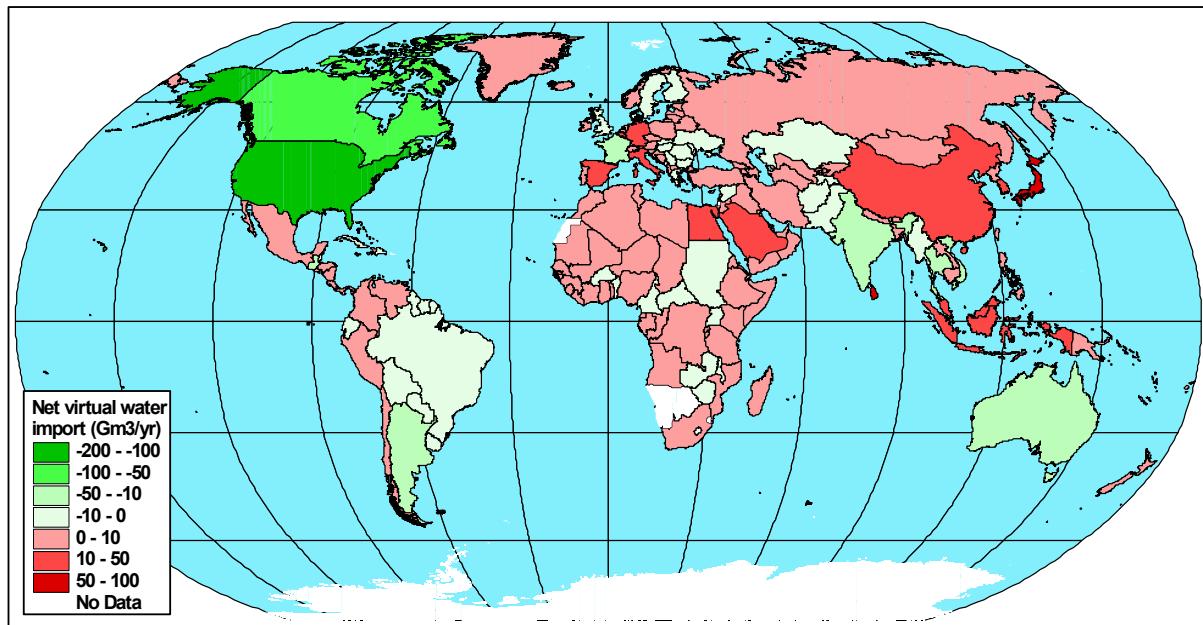

Figure 6.1. National virtual water balances relating to crop trade over the period 1995-99. Green coloured countries have net virtual water export. Red coloured countries have net virtual water import. Source: Hoekstra and Hung (2002).

Countries are ranked according to their net virtual water export from 1995 to 1999. The United States, Canada, Thailand, Argentina and India are at the top of the list. Countries with net virtual water import are ranked similarly and in this list Sri Lanka, Japan, the Netherlands, South Korea and China are in the top positions. Hoekstra and Hung (2002) give a complete list of countries and their virtual water imports and exports related to crops. The top twenty countries in each category are shown in Table 6.1.

Regional analysis by Hoekstra and Hung (2002) shows that North America is the largest net exporter ($206 \text{ Gm}^3/\text{yr}$) and Central and South Asia is the largest net importer ($167 \text{ Gm}^3/\text{yr}$) of virtual water associated with the international trade in crops.

Net virtual water flows between regions in the period 1995-99 are presented in Figure 6.2. The biggest trade flows ($>20 \text{ Gm}^3/\text{yr}$) are indicated with arrows. The regions with net import are marked in red and those with net export in green.

Table 6.1. The top twenty net virtual water exporting and importing countries (1995-99). This table relates to virtual water flows associated with crop trade only.

Country	Net export volume (Gm ³ /yr)	Country	Net import volume (Gm ³ /yr)
United States	151.7	1	Sri Lanka
Canada	54.5	2	Japan
Thailand	46.7	3	Netherlands
Argentina	45.3	4	South Korea
India	32.2	5	China
Australia	29.1	6	Indonesia
Vietnam	18.0	7	Spain
France	17.7	8	Egypt
Guatemala	14.3	9	Germany
Brazil	9.0	10	Italy
Paraguay	8.4	11	Belgium
Kazakhstan	7.8	12	Saudi Arabia
Ukraine	6.4	13	Malaysia
Syria	4.3	14	Algeria
Hungary	4.0	15	Mexico
Myanmar	3.5	16	Taiwan
Uruguay	2.4	17	Colombia
Greece	2.0	18	Portugal
Dominican Republic	1.9	19	Iran
Romania	1.8	20	Bangladesh

Source: Hoekstra and Hung (2002).

6.2. The complete picture

The complete picture of virtual water flows arises if we combine the results from Chapter 5 with the data from Section 6.1. The global volume of international virtual water flows during the period 1995-99 was 1031 Gm³ per year in average (Table 6.2). Virtual water flows related to the trade in livestock and livestock products constitute approximately 33 per cent of the total virtual water flows.

Table 6.2. Global volume of international virtual water flows (Gm³/yr) during the period 1995-99.

Year	Related to trade in crops	Related to trade in livestock and livestock products	Combined
1995	559	314	874
1996	813	332	1144
1997	793	354	1147
1998	700	341	1042
1999	601	337	937
Average	695	336	1031

Total water use for crop production in the world is 5400 Gm³/yr (Rockström and Gordon, 2001). The virtual water flows related to the international trade in agricultural products thus constitute about 19 percent of total water used for crop production. The top twelve net exporters and net importers of virtual water from the trade in agricultural products are shown in Table 6.3. The relative position of different countries in this list is more or less governed by the virtual water flows related to crop trade. However, combining the two sets of data gives a change in position for some countries. For example, New Zealand is a virtual water importer (0.89 Gm³/yr) as regards the trade in crops (Hoeksta and Hung, 2002), but is now in ninth position in the list of net exporters, with 19.5 Gm³/yr over the period 1995-99. The Netherlands partly balances its deficit in its crop-related virtual water balance through the export of livestock products.

Table 6.3. Top twelve countries in terms of net virtual water export and import. Period: 1995-99.

Countries with net export	Virtual water flows (Gm ³ /yr)			Rank	Countries with net import	Virtual water flows (Gm ³ /yr)		
	Export	Import	Net export			Export	Import	Net import
USA	248.5	66.3	-182.3	1	Japan	1.4	89.8	88.4
Australia	69.9	2.0	-67.9	2	Sri Lanka	4.0	87.7	83.7
Canada	77.6	11.8	-65.7	3	Italy	16.8	53.7	36.9
Argentina	58.5	2.6	-56.0	4	South Korea	4.4	40.4	35.9
Thailand	53.5	7.3	-46.2	5	Netherlands	20.4	45.9	25.5
India	40.4	4.4	-36.0	6	Indonesia	1.6	26.7	25.2
France	44.4	21.8	-22.6	7	China	17.1	37.0	19.9
New Zealand	20.8	1.3	-19.5	8	Hong Kong	0.8	20.3	19.5
Viet Nam	18.2	0.5	-17.7	9	Egypt	1.0	20.0	18.9
Brazil	44.4	28.3	-16.2	10	Taiwan	0.2	17.9	17.7
Guatemala	15.8	1.6	-14.2	11	Spain	12.2	29.8	17.6
Paraguay	9.7	0.9	-8.8	12	Mexico	18.7	32.0	13.3

The total net virtual water balance of different countries is shown in Figure 6.3. The green coloured countries have net virtual water export, the red coloured ones net virtual water import.

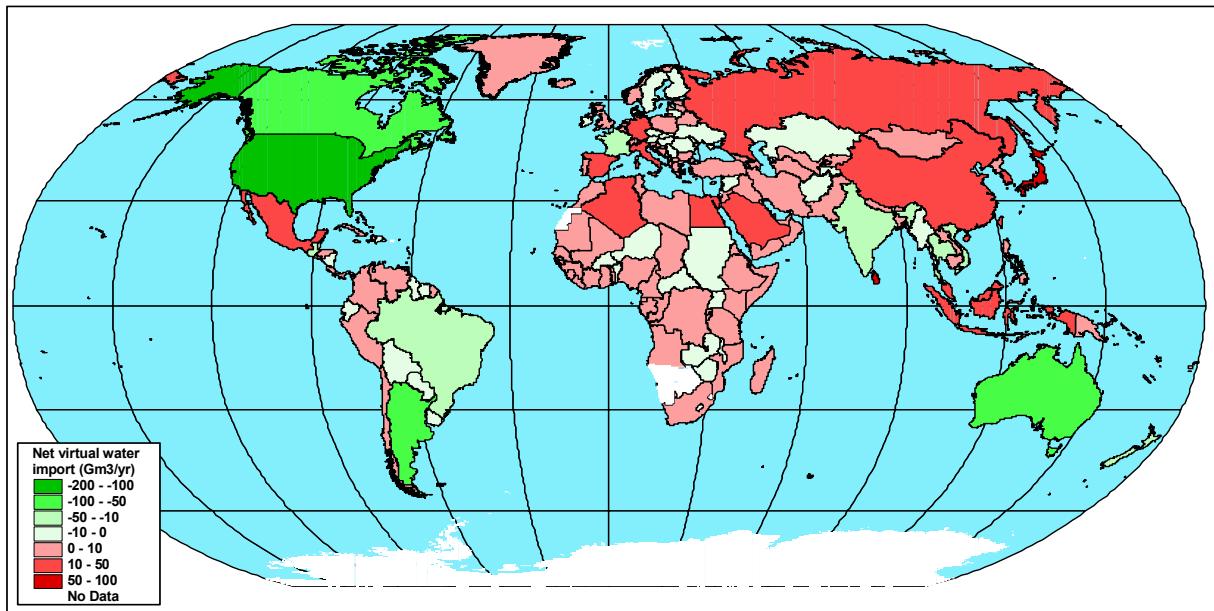

Figure 6.3. National virtual water balances. Period 1995-99.

The largest inter-regional virtual water flows are shown in Figure 6.4. The average annual gross and net virtual water flows between and within regions in the period 1995-99 are presented in Tables 6.4 and 6.5 respectively. The overall ranking of the regions regarding their virtual water balances during the period 1995-99 is given in Table 6.6. Generally a few countries dominate the regional analysis. For example, Japan (88 Gm³/yr) and Sri Lanka (84 Gm³/yr), the two largest net importers, are both in Central and South Asia, making the whole region a net importer.

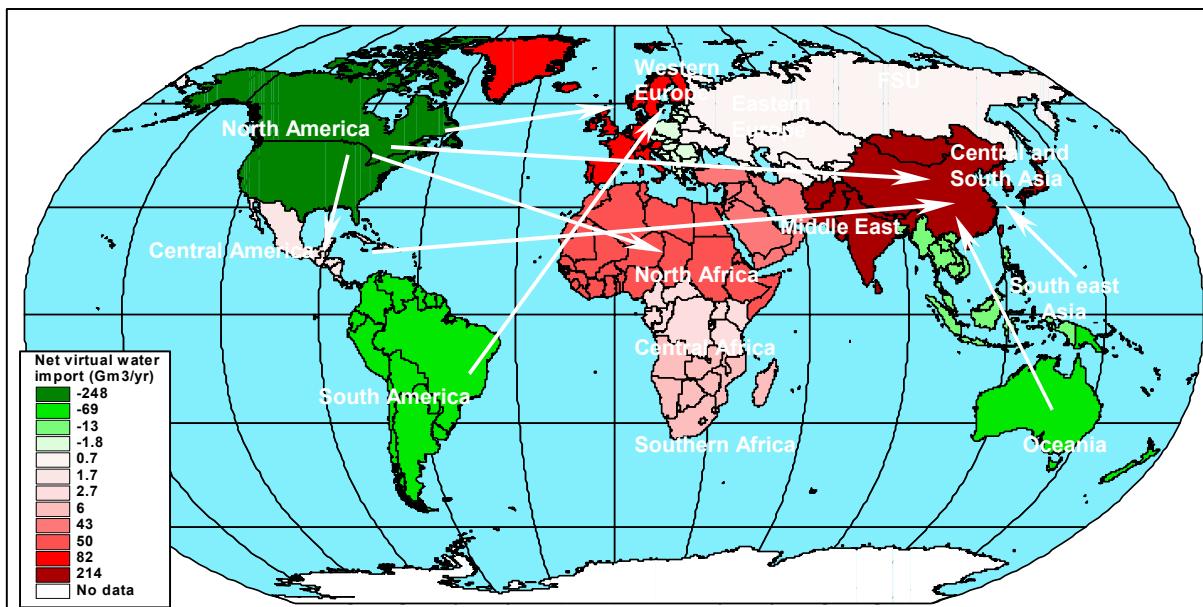

Figure 6.4. Virtual water balances of the thirteen world regions. Period: 1995-99. The biggest net flows (>20 Gm³/yr) are indicated with arrows.

Table 6.4. Gross virtual water flows between world regions in the period 1995-99 (10⁶m³/yr). The grey-shaded cells refer to gross flows between countries within the regions.

1. See notes on Table 5.5.

Table 6.6. Virtual water balance of the thirteen world regions in relation to the trade in crops, livestock and livestock products (Gm^3/yr) in the period 1995-99.

World regions	Virtual water balance (Gm^3/yr)		
	$= \text{gross import} - \text{gross export}$		
	Crops	Livestock and livestock products	Total
North America	-206.2	-41.9	-248.0
South America	-47.9	-21.4	-69.3
Oceania	-28.0	-41.3	-69.3
South-east Asia	-27.1	13.9	-13.1
Eastern Europe	-1.0	-0.8	-1.8
Former Soviet Union (FSU)	-8.9	9.6	0.7
Central America	-4.4	6.2	1.7
Central Africa	2.3	0.4	2.7
Southern Africa	4.0	2.0	6.0
Middle East	30.2	13.2	43.4
North Africa	44.4	5.3	49.8
Western Europe	76.1	5.6	81.7
Central and South Asia	166.5	47.2	213.7

The complete picture of the regional analysis shows that the largest virtual water exporter is North America and the largest importer Central and South Asia. Some regions that are net exporters in relation to crops are net importers with regard to livestock products. For instance, South-east Asia has a net export of 27 Gm^3/yr from crop trade during the period 1995-99, whereas it has a net import of 14 Gm^3/yr in the same period in the form of livestock trade. FSU and Central America, net exporters in relation to the crop trade, nearly balance their trade if we take livestock and livestock products into account.

6.3. National water footprints, water self-sufficiency and water dependency

The complete list of water footprint per capita (m^3 per capita per year), water scarcity, water self-sufficiency and water dependency of nations is presented in Appendix XVIII. Countries with water footprints of more than 500 $\text{m}^3/\text{capita/year}$ are listed in Table 6.7. The basic data on national water withdrawal and water availability for the year 1998 have been taken from AQUASTAT2000 (FAO, 2003a) and data for net virtual water import related to the trade in crops is taken from Hoekstra and Hung (2002).

The water footprints calculated in the study include the *blue water* use in the country and the import and export of virtual water. It thus excludes the *green water* consumed in a country for the production of food or other products. Zimmer and Renault (2003) have shown that on average traded virtual water makes only about 35 per cent of consumed virtual water. Hence the water footprints calculated are conservative.

The water footprint calculations have to be taken with due care. One reason is the above mentioned fact that they do not include green water use in a country. Another reason is that still quite some improvements can be made in the assessment of the international virtual water flows related to crop trade. For instance, Hoekstra and Hung (2000) have only considered a limited number of crops. Besides, virtual water flows related to industrial products such as cotton and paper have not yet been included in the analysis. Including the export of cotton - a large water user - from a country such as Uzbekistan will surely reduce its water footprint from the current estimate. Furthermore, it is important to see the origin of virtual water in a country's water footprint. What is the proportion of blue water (making a *blue water footprint*) and green water (making a *green water footprint*) in it? What were the possible alternative uses that could have been made with these resources? Answers to these questions will enable a better interpretation of the water footprint.

7. Conclusion

Although the bulk of food trade is in the form of cereals, the international virtual water flows related to trade in livestock and livestock products are quite significant (nearly half of the volume of virtual water flows related to crop trade). The reason for this is that the virtual water content of livestock products is very high compared to the virtual water content of cereal crops. A change in the diet of a nation could thus intensify or nullify virtual water imbalances. For example, if the Chinese people changed their diet to that of an average American, the virtual water balance of the Central and South Asia region, which is already a net importer of virtual water, would worsen severely.

When undertaking this study it soon became apparent that a shortage of data posed a serious problem which may be the reason why such quantifications have not been attempted thus far. Missing data have to be substituted by assumptions and best estimates, which certainly leaves room for future improvements. It also points to a general lack of quantitative information on the livestock sector, which can be partly explained by the complexity of the subject.

This is only a first step forward in defining a logical methodology to calculate the virtual water flows in relation to the international trade in livestock products; refinement of the method and collection of more reliable data are possible and necessary.

Appendix I. Symbols

Symbol	Unit	Description
$Age_{adult}[e,a]$	day	Age of animal a when adulthood is reached
$C_{max}[e,a,c]$	ton/day	Quantity of feed crop c in daily feed composition of an adult animal
$C_{min}[e,a,c]$	ton/day	Quantity of feed crop c in daily feed composition of a baby animal
$C[e,a,c]$	ton/day	Quantity of feed crop c consumed by animal a in exporting country e
$CWR[e,c]$	m^3/ha	Crop water requirement of crop c in exporting country e
$CY[e,c]$	ton/ha	Crop Yield of crop c in exporting country e
$pf[e,p]$	ton/ton	Product fraction of product p per ton of root product in exporting country e
$PT[e,i,p,t]$	ton/yr	Quantity of product export from country e to country i in year t
$PWR[e,a]$	m^3/ton	Process water requirement per ton of live animal a in exporting country e
$PWR[e,p]$	m^3/ton	Process water requirement per ton of root product p in exporting country e
$q_d[e,a]$	m^3/day	Daily drinking water requirement of animal a in exporting country e
$q_{max}[e,a]$	m^3/day	Daily drinking water requirement of an adult animal
$q_{min}[e,a]$	m^3/day	Daily drinking water requirement of a baby animal
$q_{mixing}[e,a]$	m^3/day	Daily water requirement for mixing the feed for animal a
$q_{serv}[e,a]$	m^3/day	Daily servicing water requirement of animal a in exporting country e
$Q_{proc}[e,a]$	$m^3/animal$	Volume of process water required per animal for producing primary products in country e
$Q_{proc}[e,p]$	m^3/ton	Volume of process water required per ton of primary products for producing secondary products in exporting country e
$SWD[e,c]$	m^3/ton	Specific water demand of crop c in exporting country e
t	day	Time
$vf[e,p]$	-	Value fraction of product p in exporting country e
$v[p]$	US\$/ton	Average market price of product p
$VWC_a[e,a]$	m^3/ton	Virtual water content of live animal a in exporting country e
$VWC_{feed}[e,a]$	m^3/ton	Virtual water content from of live animal a in exporting country e insofar related to feeding
$VWC_{drink}[e,a]$	m^3/ton	Virtual water content from drinking water supply of live animal a in exporting country e insofar related to drinking
$VWC_{serv}[e,a]$	m^3/ton	Virtual water content from servicing water supply of live animal a in exporting country e insofar related to use of 'service water'
$VWC_p[e,p]$	m^3/ton	Virtual water content of product p in exporting country e
$VWF[e,i,p,t]$	m^3/yr	Virtual water flow from exporting country e to importing country i in the form of livestock product p in year t .
$W_a[e,a]$	ton	Weight of animal a at the end of its life span in exporting country e
$W_p[e,p]$	ton	Weight of primary product p

Dimension	Number of elements	Description	Size	Remarks
t	[1, n _t]	Years	n _t = 5	1995-1999
c	[1, n _c]	Crop types	n _c =38	See Hoekstra and Hung (2002)
a	[1, n _a]	Kinds of animal ¹	n _a = 8	See Table 3.2
p	[1, n _p]	Livestock products	n _p = 128	See Appendix II
e	[1, n _e]	Exporting countries	n _e = 219	See Appendix VII
i	[1, n _i]	Importing countries	n _i = 219	See Appendix VII

¹ Remark: Each individual product p originates from one particular animal type a .

Appendix II. List of livestock products in PC-TAS

PC-TAS product group	PC-TAS product code	Livestock products
AA	010111	Horses, live pure-bred breeding
AA	010119	Horses, live except pure-bred breeding
AA	010120	Asses, mules and hinnies, live
AA	010210	Bovine, live pure-bred breeding
AA	010290	Bovine, live except pure-bred breeding
AA	010310	Swine, live pure-bred breeding
AA	010391	Swine, live except pure-bred breeding weighing less than 50 kg
AA	010392	Swine, live except pure-bred breeding weighing 50 kg or more
AA	010410	Sheep, live
AA	010420	Goats, live
AA	010511	Fowls, live domestic weighing not more than 185 g
AA	010519	Poultry, live except domestic fowls, weighing not more than 185 g
AA	010599	Poultry, live except domestic fowls, weighing more than 185 g
AA	010600	Animals, live, not else specified
AB	020110	Bovine carcasses and half carcasses, fresh or chilled
AB	020120	Bovine cuts bone in, fresh or chilled
AB	020130	Bovine cuts boneless, fresh or chilled
AB	020210	Bovine carcasses and half carcasses, frozen
AB	020220	Bovine cuts bone in, frozen
AB	020230	Bovine cuts boneless, frozen
AB	020311	Swine carcasses and half carcasses, fresh or chilled
AB	020312	Hams, shoulders and cuts thereof, of swine bone in, fresh or chilled
AB	020319	Swine cuts, fresh or chilled, not else specified
AB	020321	Swine carcasses and half carcasses, frozen
AB	020322	Hams, shoulders and cuts thereof, of swine, bone in, frozen
AB	020329	Swine cuts, frozen not else specified
AB	020410	Lamb carcasses and half carcasses, fresh or chilled
AB	020421	Sheep carcasses and half carcasses, fresh or chilled
AB	020422	Sheep cuts, bone in, fresh or chilled
AB	020423	Sheep cuts, boneless, fresh or chilled
AB	020430	Lamb carcasses and half carcasses, frozen
AB	020441	Sheep carcasses and half carcasses, frozen
AB	020442	Sheep cuts, bone in, frozen
AB	020443	Sheep cuts, boneless, frozen
AB	020450	Goat meat, fresh, chilled or frozen
AB	020500	Horse, ass, mule or hinny meat, fresh, chilled or frozen
AB	020610	Bovine edible offal, fresh or chilled
AB	020621	Bovine tongues, edible offal, frozen

PC-TAS product group	PC-TAS product code	Livestock products
AB	020622	Bovine livers, edible offal, frozen
AB	020629	Bovine edible offal, frozen, not else specified
AB	020630	Swine edible offal, fresh or chilled
AB	020641	Swine livers, edible offal, frozen
AB	020649	Swine edible offal, frozen, not else specified
AB	020680	Sheep, goats, asses, mules or hinnies edible offal, fresh or chilled
AB	020690	Sheep, goats, asses, mules or hinnies edible offal, frozen
AB	020810	Rabbit or hare meat and edible meat offal, fresh, chilled or frozen
AB	020820	Frog legs, fresh, chilled or frozen
AB	020890	Meat and edible meat offal, not else specified, fresh, chilled or frozen
AY	020900	Pig fat lean meat free & poultry fat unrendered, fresh, chilled, frozen or cured
AC	021011	Hams, shoulders and cuts thereof, of swine bone in, cured
AC	021012	Bellies, streaky and cuts thereof, swine cured
AC	021019	Swine meat & meat offal not else specified /excluding livers / including mixtures, prepared or preserved
AC	021020	Bovine meat cured
AC	021090	Meat & edible meat offal cured not else specified & edible meat or offal, flours & meals
AY	030510	Fish meal fit for human consumption
AG	040110	Milk not concentrated and unsweetened not exceeding 1% fat
AG	040120	Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat
AG	040130	Milk and cream not concentrated and unsweetened exceeding 6% fat
AG	040210	Milk powder not exceeding 1.5% fat
AG	040221	Milk and cream powder unsweetened exceeding 1.5% fat
AG	040229	Milk and cream powder sweetened exceeding 1.5% fat
AG	040291	Milk and cream unsweetened, not else specified
AG	040299	Milk and cream not else specified sweetened
AG	040310	Yogurt concentrated or not, sweetened or not, flavoured or contg, fruit or cocoa
AG	040390	Buttermilk, curdled milk & cream, kefir & ferm or acid milk & cream not else specified
AG	040410	Whey whether or not concentrated or sweetened
AG	040490	Products consisting of natural milk constituents sweetened or not, not else specified
AG	040610	Cheese, fresh (including whey cheese) unfermented, and curd
AG	040620	Cheese, grated or powdered, of all kinds
AG	040630	Cheese processed, not grated or powdered
AG	040640	Cheese, blue-veined
AG	040690	Cheese not else specified
AG	040700	Eggs, bird, in shell, fresh, preserved or cooked
AG	040811	Egg yolks dried
AG	040819	Egg yolks not else specified

PC-TAS product group	PC-TAS product code	Livestock products
AG	040891	Eggs, bird, not in shell, dried
AG	040899	Eggs, bird, not in shell not else specified
AY	041000	Edible products of animal origin not else specified
AZ	050100	Hair, human, unworked washed or scoured or not and waste
AZ	050210	Bristles, hair and waste of pigs, hogs or boars
AZ	050290	Hair and waste of badger and of other brushmaking hair
AZ	050300	Horsehair & waste put up or not as a layer with or without supg material
AZ	050400	Guts, bladders and stomachs of animals except fish whole or in pieces
AZ	051110	Semen bovine
AC	160100	Sausage & similar products of meat, meat offal / blood & food prepared based on these products
AC	160210	Homogenized preparations of meat and meat offal
AC	160220	Livers of any animal prepared or preserved
AC	160231	Turkey meat and meat offal prepared or preserved, excluding livers
AC	160239	Dom fowl, duck, goose & guinea fowl meat & meat offal prepared / preserved excluding livers
AC	160241	Hams and cuts thereof of swine prepared or preserved
AC	160242	Shoulders and cut thereof of swine prepared or preserved
AC	160249	Swine meat cured, not else specified
AC	160250	Bovine meat and meat offal not else specified, excluding livers, prepared or preserved
AC	160290	Meat, meat offal or blood, prepared or preserved, not else specified
AY	160300	Extracts & juices of meat, fish, or crust, molluscs/other aquatic invertebrate
HA	410110	Bovine skins, whole, raw
HA	410121	Bovine hides, whole, fresh or wet-salted
HA	410122	Butts and bends, bovine, fresh or wet-salted
HA	410129	Hide sections, bovine, not else specified, fresh or wet-salted
HA	410130	Bovine hides, raw, not else specified
HA	410140	Equine hides and skins, raw
HA	410210	Sheep or lamb skins, raw, with wool on, not else specified
HA	410221	Sheep or lamb skins, pickled, without wool on
HA	410229	Sheep or lamb skins, raw, o/t pickled, without wool on
HA	410310	Goat or kid hides and skins, raw, not else specified
HA	410390	Raw hides and skins of animals, not else specified s
HB	410410	Bovine skin leather, whole
HB	410421	Bovine leather, vegetable pre-tanned, not else specified
HB	410422	Bovine leather, otherwise pre-tanned, not else specified
HB	410429	Bovine and equine leather, tanned or retanned, not else specified
HB	410431	Bovine and equine leather, full/split grains, not else specified
HB	410439	Bovine and equine leather, not else specified

PC-TAS product group	PC-TAS product code	Livestock products
HB	410511	Sheep or lamb skin leather, vegetable pre-tanned
HB	410512	Sheep or lamb skin leather, otherwise pre-tanned
HB	410519	Sheep or lamb skin leather, tanned or retanned, not else specified
HB	410520	Sheep or lamb skin leather, not else specified
HB	410611	Goat or kid skin leather, vegetable pre-tanned
HB	410612	Goat or kid skin leather, otherwise pre-tanned
HB	410619	Goat or kid skin leather, tanned or retanned, not else specified
HB	410620	Goat or kid skin leather, not else specified
HB	410710	Swine leather, not else specified
HB	410790	Leather, not else specified
HB	410800	Chamois (including combination chamois) leather
HB	410900	Patent leather and patent laminated leather; metallised leather
HB	411000	Parings and other waste of leather; leather dust, powder and flour
HB	411100	Composition leather, in slabs, sheets or strip
HZ	420400	Articles of leather or of composition leather, for technical uses
HZ	420500	Articles of leather or of composition leather, not else specified

Appendix III. Livestock products and their share of global trade (1995-99)

Product code	Product name	Quantity (ton/yr)	Value (103 US\$/yr)	Share of total trade value (%)
040690	Cheese not else specified	2008562	7729440	8.7
020130	Bovine cuts boneless, fresh or chilled	1100354	4561610	5.1
020230	Bovine cuts boneless, frozen	2173175	4541572	5.1
410431	Bovine and equine leather, full/split grains, not else specified	239435	4304938	4.9
010290	Bovine, live except pure-bred breeding	2116354	4124842	4.6
020329	Swine cuts, frozen not else specified	1396956	3554016	4.0
040221	Milk and cream powder unsweetened exceeding 1.5% fat	1434520	3285853	3.7
040210	Milk powder not exceeding 1.5% fat	1540442	2988496	3.4
020120	Bovine cuts bone in, fresh or chilled	900042	2843375	3.2
410121	Bovine hides, whole, fresh or wet-salted	1563531	2736820	3.1
020319	Swine cuts, fresh or chilled, not else specified	887462	2372575	2.7
410439	Bovine and equine leather, not else specified	135322	2297269	2.6
040120	Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat	4401999	1882985	2.1
020312	Hams, shoulders and cuts thereof, of swine bone in, fresh or chilled	923953	1867709	2.1
160100	Sausage & similar products of meat, meat offal / blood & food prepared based on these products	593593	1536637	1.7
050400	Guts, bladders and stomachs of animals except fish whole or in pieces	375906	1342880	1.5
021019	Swine meat & meat offal not else specified /excluding livers / including mixtures, prepared or preserved	318407	1312166	1.5
040630	Cheese processed, not grated or powdered	364447	1297805	1.5
020311	Swine carcasses and half carcasses, fresh or chilled	682413	1248895	1.4
010392	Swine, live except pure-bred breeding weighing 50 kg or more	909982	1248704	1.4
020110	Bovine carcasses and half carcasses, fresh or chilled	331441	1182740	1.3
160239	Dom fowl, duck, goose & guinea fowl meat & meat offal prepared / preserved excluding livers	344320	1165899	1.3
410422	Bovine leather, otherwise pre-tanned, not else specified	499603	1138069	1.3
040610	Cheese, fresh (including whey cheese) unfermented, and curd	385077	1089072	1.2
160250	Bovine meat and meat offal not else specified, excluding livers, prepared or preserved	417934	1087278	1.2
040700	Eggs, bird, in shell, fresh, preserved or cooked	881556	1059829	1.2
040130	Milk and cream not concentrated and unsweetened exceeding 6% fat	592575	937490	1.1
410520	Sheep or lamb skin leather, not else specified	17046	917205	1.0
410429	Bovine and equine leather, tanned or retanned, not else specified	1510410	896257	1.0
040291	Milk and cream unsweetened, not else specified	705251	768473	0.87

Product code	Product name	Quantity (ton/yr)	Value (103 US\$/yr)	Share of total trade value (%)
410410	Bovine skin leather, whole	90861	750517	0.85
040410	Whey whether or not concentrated or sweetened	1486879	729061	0.82
160249	Swine meat cured, not else specified	265431	715722	0.81
420500	Articles of leather or of composition leather, not else specified	87487	688355	0.78
020442	Sheep cuts, bone in, frozen	302416	632067	0.71
010111	Horses, live pure-bred breeding	6542	618173	0.70
010410	Sheep, live	542183	617153	0.70
040390	Buttermilk, curdled milk & cream, kefir & ferm or acid milk & cream not else specified	498890	580728	0.65
020410	Lamb carcasses and half carcasses, fresh or chilled	155733	577003	0.65
040310	Yogurt concentrated or not, sweetened or not, flavoured or contg, fruit or cocoa	527600	565740	0.64
160241	Hams and cuts thereof of swine prepared or preserved	124214	539221	0.61
020629	Bovine edible offal, frozen, not else specified	344702	499653	0.56
010119	Horses, live except pure-bred breeding	165655	496345	0.56
020220	Bovine cuts bone in, frozen	256832	471102	0.53

Appendix IV. Classification of livestock products based on animal category and their contribution to global trade.

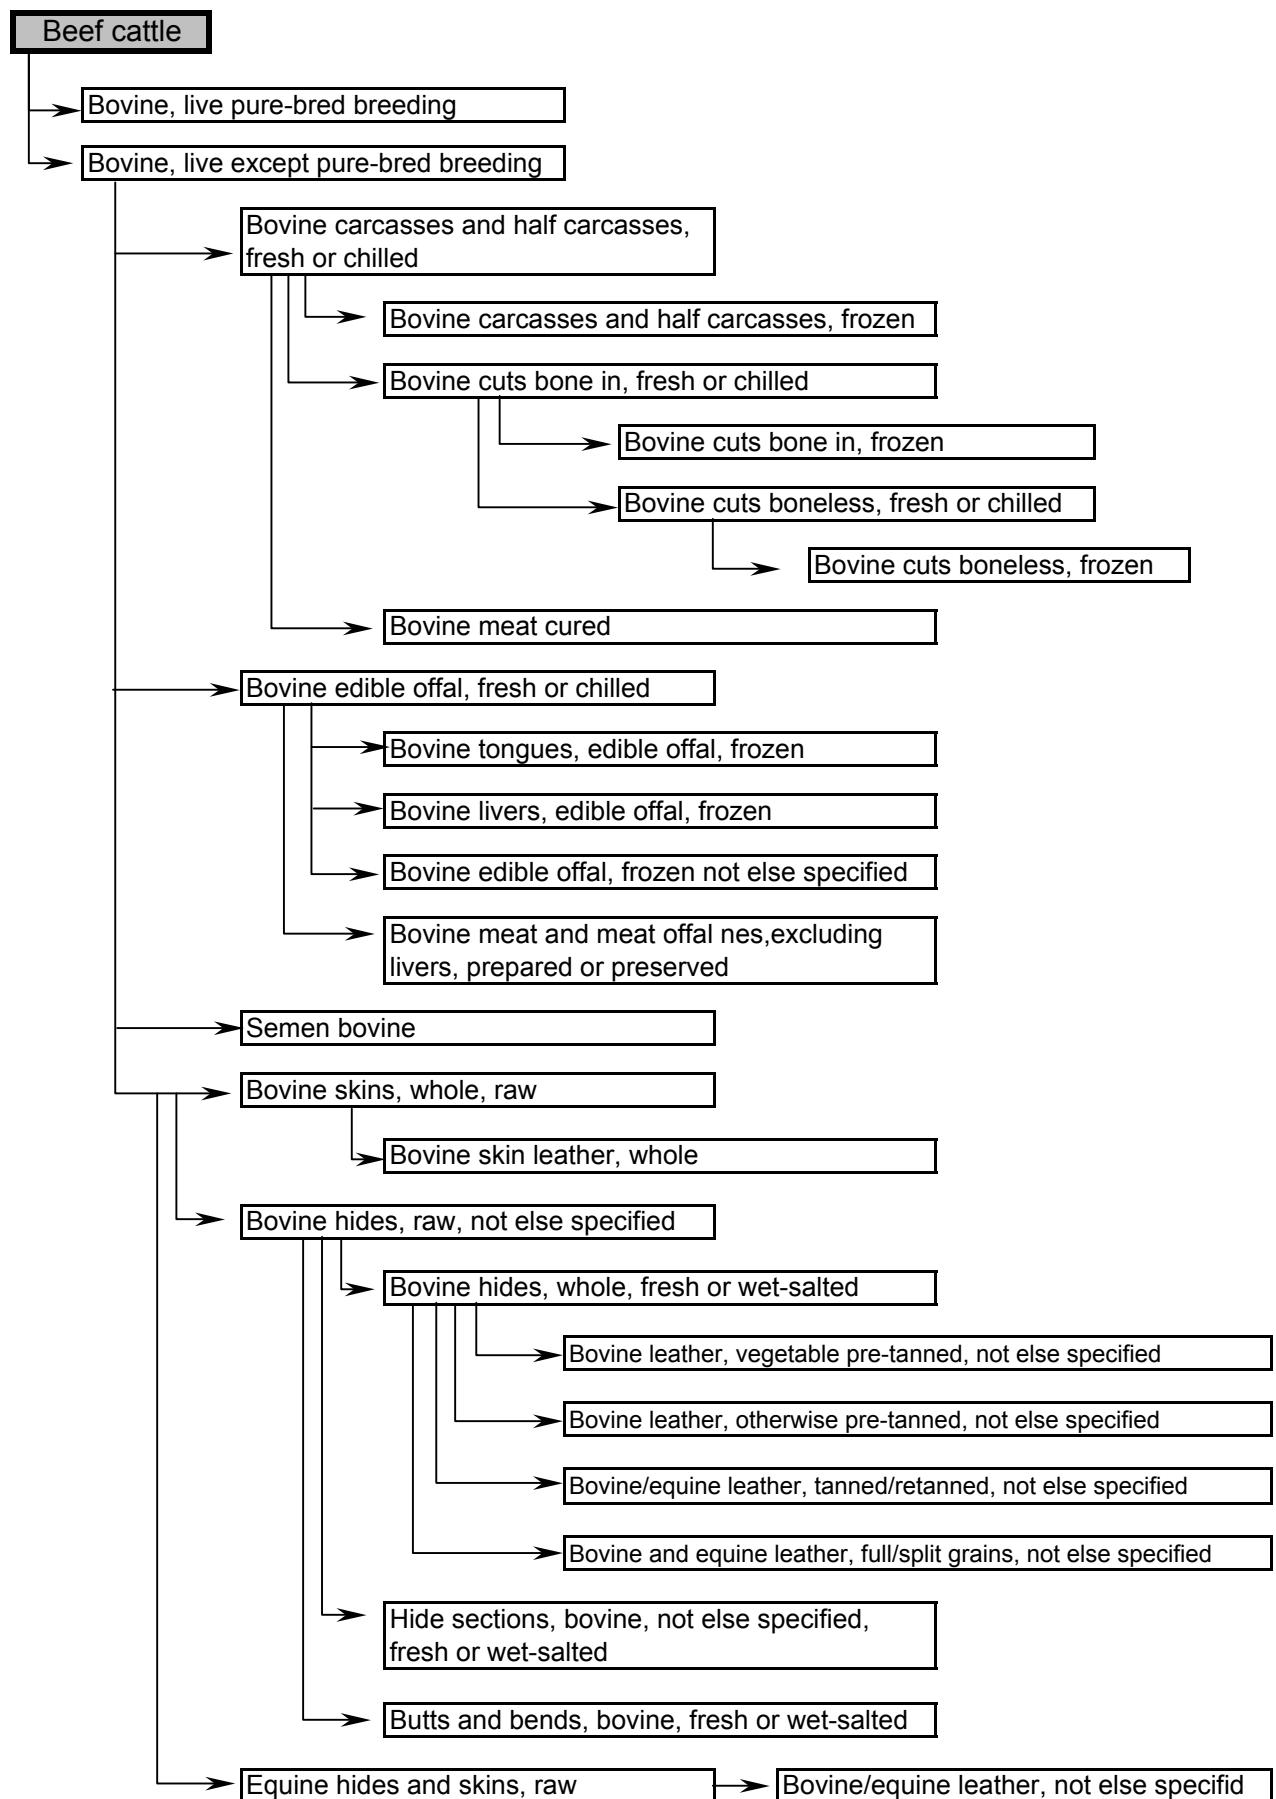

Animal category	Product	Average trade value in year 1995-1999 (billion US\$/yr)	Contribution to total trade (%)
Beef cattle	<ul style="list-style-type: none"> - Bovine cuts boneless, fresh or chilled - Bovine cuts boneless, frozen - Bovine and equine leather, full/split grains, not else specified - Bovine, live except pure-bred breeding - Bovine cuts bone in, fresh or chilled - Bovine hides, whole, fresh or wet-salted - Bovine and equine leather, not else specified - Bovine carcasses and half carcasses, fresh or chilled - Bovine leather, otherwise pre-tanned, not else specified - Bovine meat and meat offal not else specified, excluding livers, prepared or preserved - Bovine and equine leather, tanned or retanned, not else specified - Bovine skin leather, whole - Bovine edible offal, frozen, not else specified - Bovine cuts bone in, frozen - Bovine skins, whole, raw - Bovine, live pure-bred breeding - Bovine edible offal, fresh or chilled - Bovine tongues, edible offal, frozen - Bovine hides, raw, not else specified - Semen bovine - Bovine livers, edible offal, frozen - Bovine leather, vegetable pre-tanned, not else specified - Hide sections, bovine, not else specified, fresh or wet-salted - Bovine carcasses and half carcasses, frozen - Butts and bends, bovine, fresh or wet-salted - Bovine meat cured - Equine hides and skins, raw 	33.5	37.7
Dairy cows	<ul style="list-style-type: none"> - Buttermilk, curdled milk & cream, kefir & ferm or acid milk & cream not else specified - Cheese not else specified - Cheese processed, not grated or powdered - Cheese, blue-veined 	23.6	26.6

Animal category	Product	Average trade value in year 1995-1999 (billion US\$/yr)	Contribution to total trade (%)
	<ul style="list-style-type: none"> - Cheese, fresh (including whey cheese) unfermented, and curd - Cheese, grated or powdered, of all kinds - Milk and cream not concentrated and unsweetened exceeding 6% fat - Milk and cream not else specified sweetened - Milk and cream powder sweetened exceeding 1.5% fat - Milk and cream powder unsweetened exceeding 1.5% fat - Milk and cream unsweetened, not else specified - Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat - Milk not concentrated and unsweetened not exceeding 1% fat - Milk powder not exceeding 1.5% fat - Products consisting of natural milk constituents sweetened or not, not else specified - Whey whether or not concentrated or sweetened - Yoghurt concentrated or not, sweetened or not, flavoured or containing, fruit or cocoa 		
Swine	<ul style="list-style-type: none"> - Bellies, streaky and cuts thereof, swine cured - Bristles, hair and waste of pigs, hogs or boars - Hams and cuts thereof of swine prepared or preserved - Hams, shoulders and cuts thereof, of swine bone in, cured - Hams, shoulders and cuts thereof, of swine bone in, fresh or chilled - Hams, shoulders and cuts thereof, of swine, bone in, frozen - Shoulders and cut thereof of swine prepared or preserved - Swine carcasses and half carcasses, fresh or chilled - Swine carcasses and half carcasses, frozen - Swine cuts, fresh or chilled, not else specified - Swine cuts, frozen not else specified - Swine edible offal, fresh or chilled - Swine edible offal, frozen, not else specified - Swine leather, not else specified - Swine livers, edible offal, frozen - Swine meat & meat offal not else specified /excluding livers / including mixtures, prepared or preserved - Swine meat cured, not else specified - Swine, live except pure-bred breeding weighing 50 kg or more - Swine, live except pure-bred breeding weighing less than 50 kg - Swine, live pure-bred breeding 	15.1	17.0

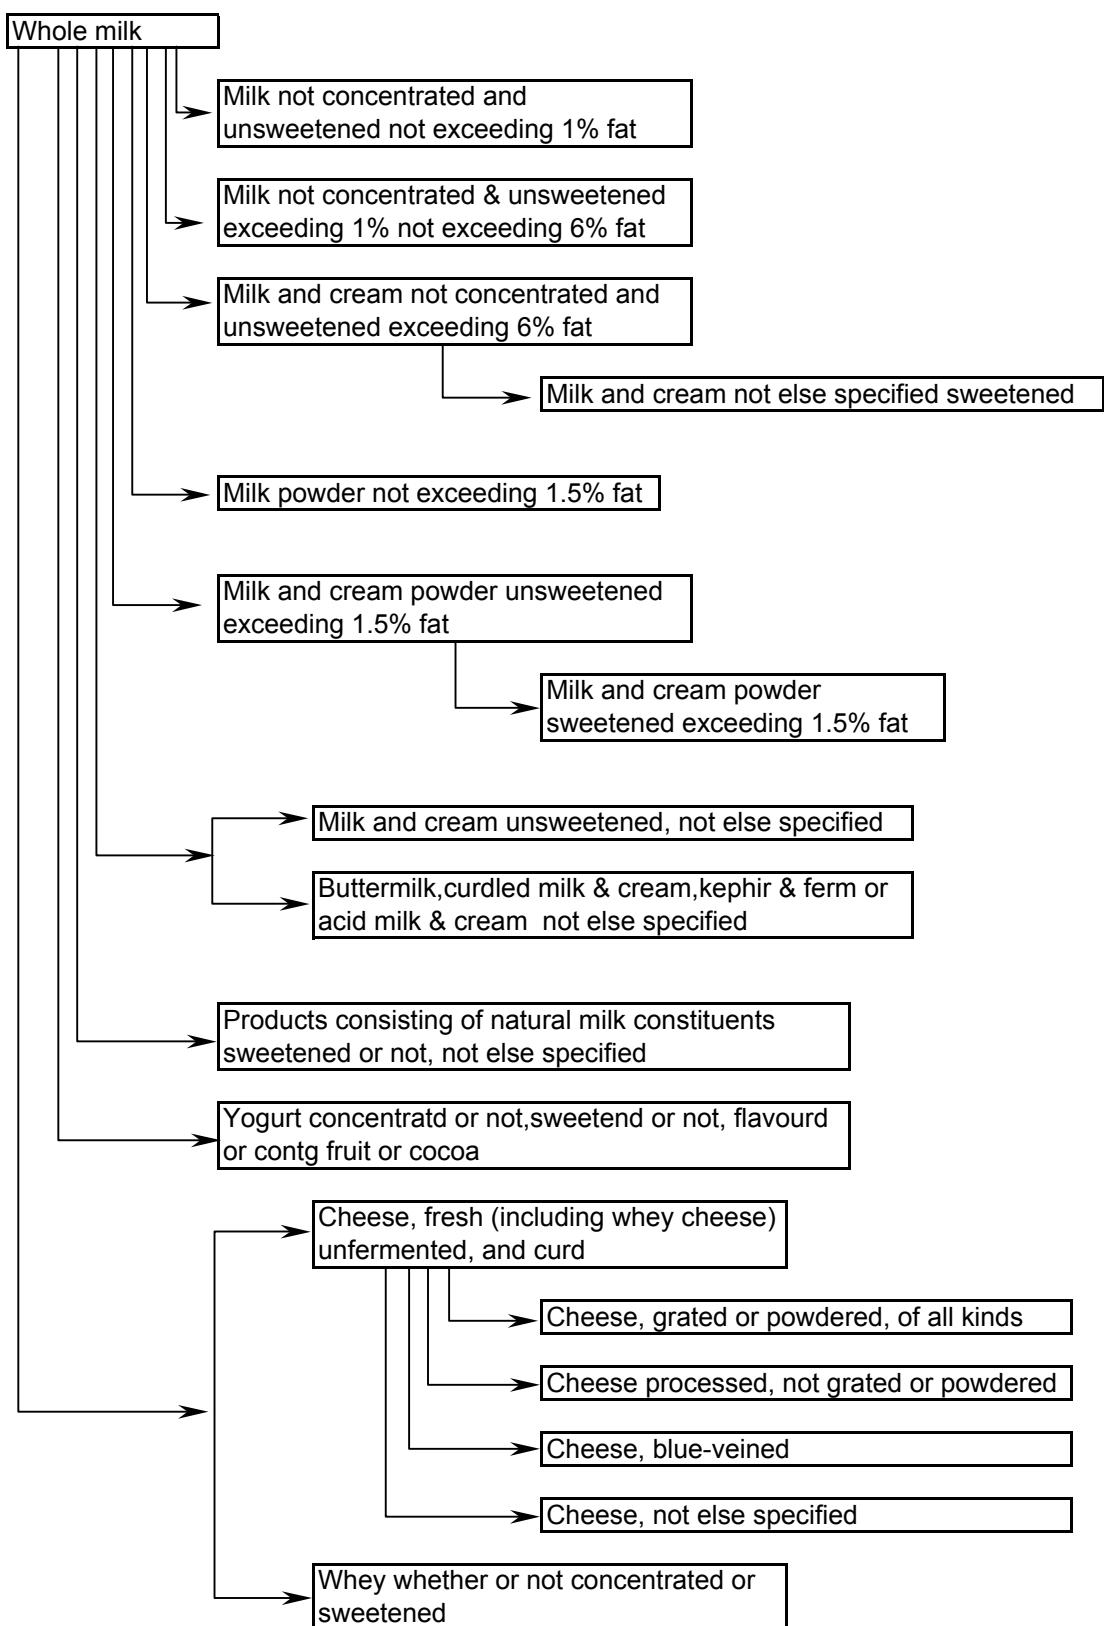

Animal category	Product	Average trade value in year 1995-1999 (billion US\$/yr)	Contribution to total trade (%)
Sheep	<ul style="list-style-type: none"> - Lamb carcasses and half carcasses, fresh or chilled - Lamb carcasses and half carcasses, frozen - Sheep carcasses and half carcasses, fresh or chilled - Sheep carcasses and half carcasses, frozen - Sheep cuts, bone in, fresh or chilled - Sheep cuts, bone in, frozen - Sheep cuts, boneless, fresh or chilled - Sheep cuts, boneless, frozen - Sheep or lamb skin leather, not else specified - Sheep or lamb skin leather, otherwise pre-tanned - Sheep or lamb skin leather, tanned or retanned, not else specified - Sheep or lamb skin leather, vegetable pre-tanned - Sheep or lamb skins, pickled, without wool on - Sheep or lamb skins, raw, o/t pickled, without wool on - Sheep or lamb skins, raw, with wool on, not else specified - Sheep, goats, asses, mules or hinnies edible offal, fresh or chilled - Sheep, goats, asses, mules or hinnies edible offal, frozen - Sheep, live 	4.8	5.4
Goats	<ul style="list-style-type: none"> - Goat meat, fresh, chilled or frozen - Goat or kid hides and skins, raw, not else specified - Goat or kid skin leather, not else specified - Goat or kid skin leather, otherwise pre-tanned - Goat or kid skin leather, tanned or retanned, not else specified - Goat or kid skin leather, vegetable pre-tanned - Goats, live 	0.44	0.50
Fowls / Poultry	<ul style="list-style-type: none"> - Dom fowl, duck, goose & guinea fowl meat & meat offal prepared / preserved excluding livers - Fowls, live domestic weighing not more than 185 g - Pig fat lean meat free & poultry fat unrendered, fresh, chilled, frozen or curd - Poultry, live except domestic fowls, weighing more than 185 g - Poultry, live except domestic fowls, weighing not more than 185 g - Turkey meat and meat offal prepared or preserved, excluding livers 	2.1	2.4

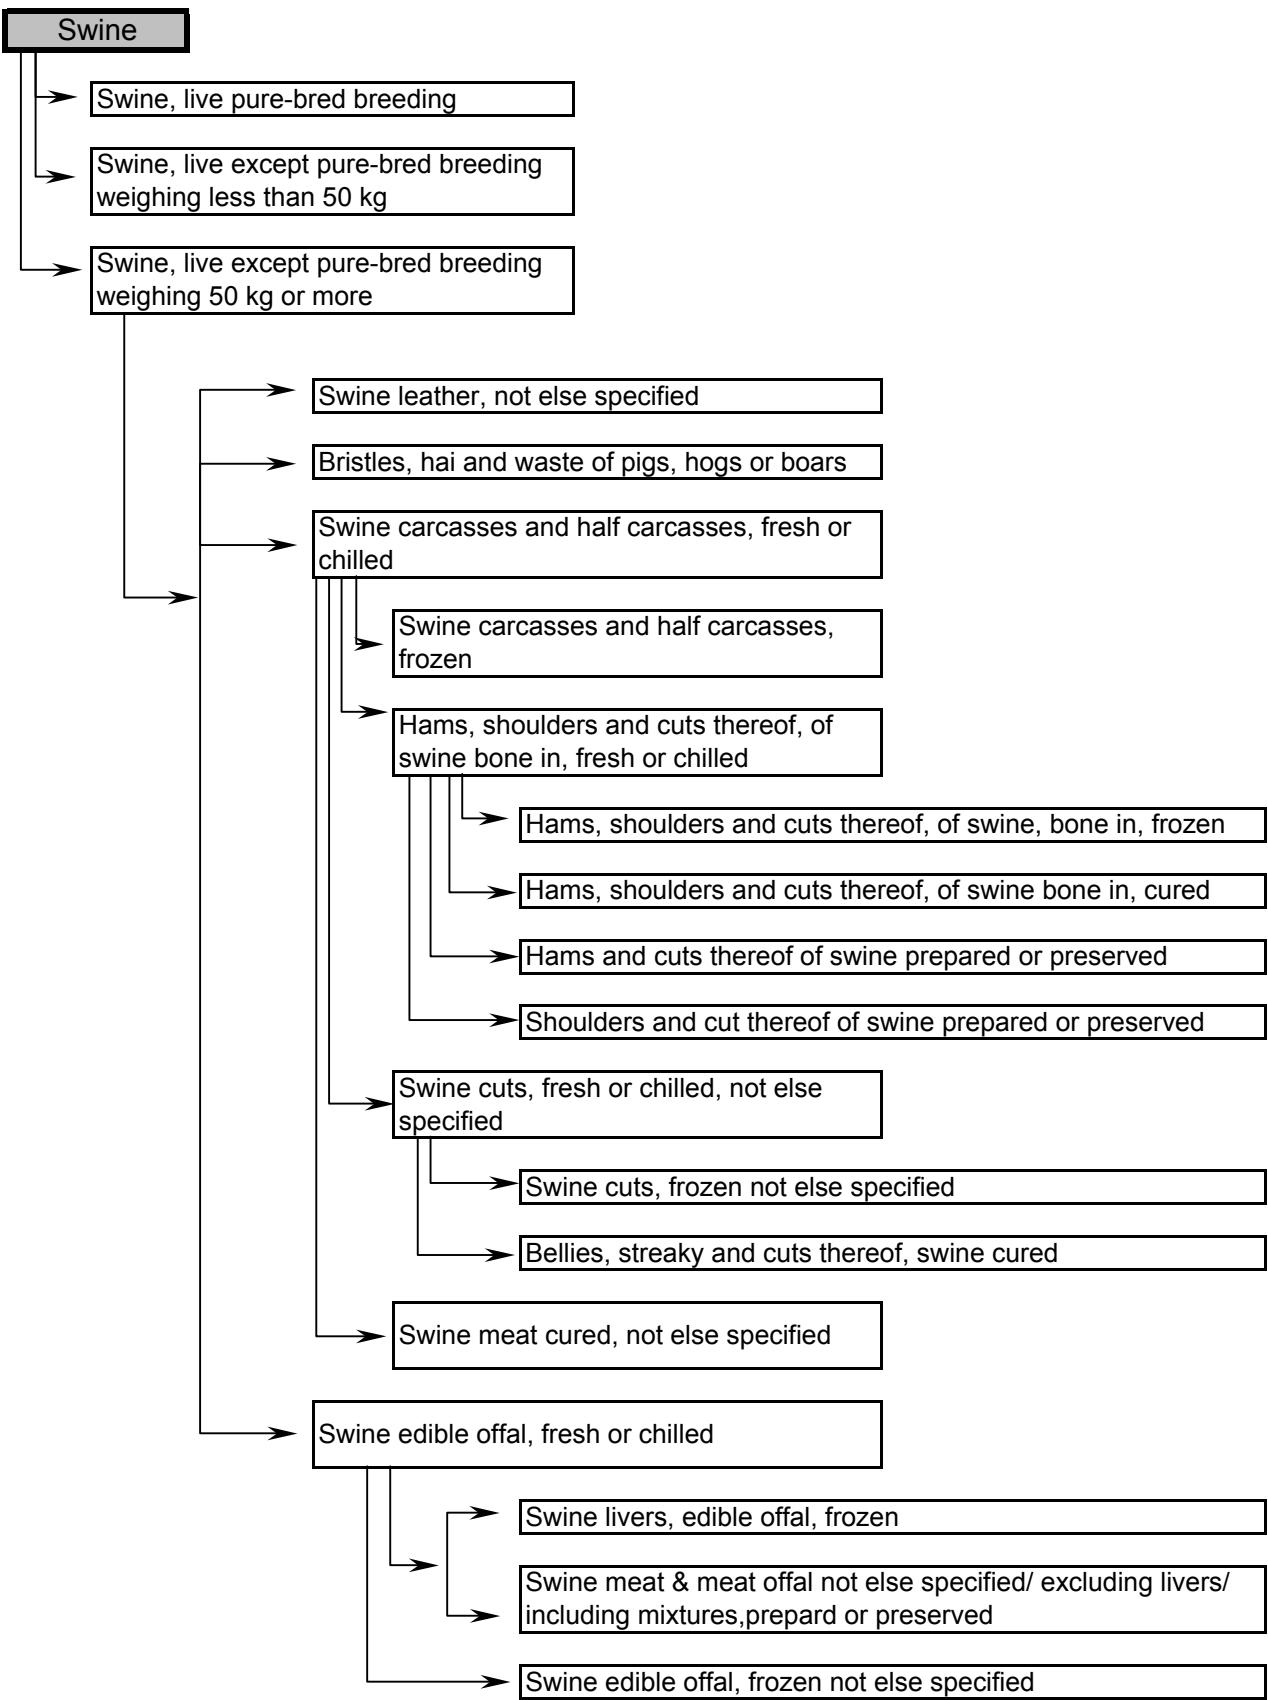

Animal category	Product	Average trade value in year 1995-1999 (billion US\$/yr)	Contribution to total trade (%)
Laying hens	<ul style="list-style-type: none"> – Egg yolks dried – Egg yolks not else specified – Eggs, bird, in shell, fresh, preserved or cooked – Eggs, bird, not in shell not else specified – Eggs, bird, not in shell, dried 	1.4	1.5
Horses	<ul style="list-style-type: none"> – Asses, mules and hinnies, live – Horse, ass, mule or hinny meat, fresh, chilled or frozen – Horsehair & waste put up or not as a layer with or without supg material – Horses, live except pure-bred breeding – Horses, live pure-bred breeding 	1.5	1.7
Others	<ul style="list-style-type: none"> – Animals, live, not else specified – Articles of leather or of composition leather, for technical uses – Articles of leather or of composition leather, not else specified – Chamois (including combination chamois) leather – Composition leather, in slabs, sheets or strip – Edible products of animal origin not else specified – Extracts & juices of meat, fish, or crust, molluscs/other aquatic invertebrt – Fish meal fit for human consumption – Frog legs, fresh, chilled or frozen – Guts, bladders and stomachs of animals except fish whole or in pieces – Hair and waste of badger and of other brush making hair – Hair, human, un-worked washed or scoured or not and waste – Homogenized preparations of meat and meat offal – Leather, not else specified – Livers of any animal prepared or preserved – Meat & edible meat offal cured not else specified & edible meat or offal, flours & meals – Meat and edible meat offal, not else specified, fresh, chilled or frozen – Meat, meat offal or blood, prepared or preserved, not else specified – Parings and other waste of leather; leather dust, powder and flour – Patent leather and patent laminated leather; metallised leather – Rabbit or hare meat and edible meat offal, fresh, chilled or frozen – Raw hides and skins of animals, not else specified s – Sausage & similar products of meat, meat offal / blood & food prepared based on these products 	6.3	7.1

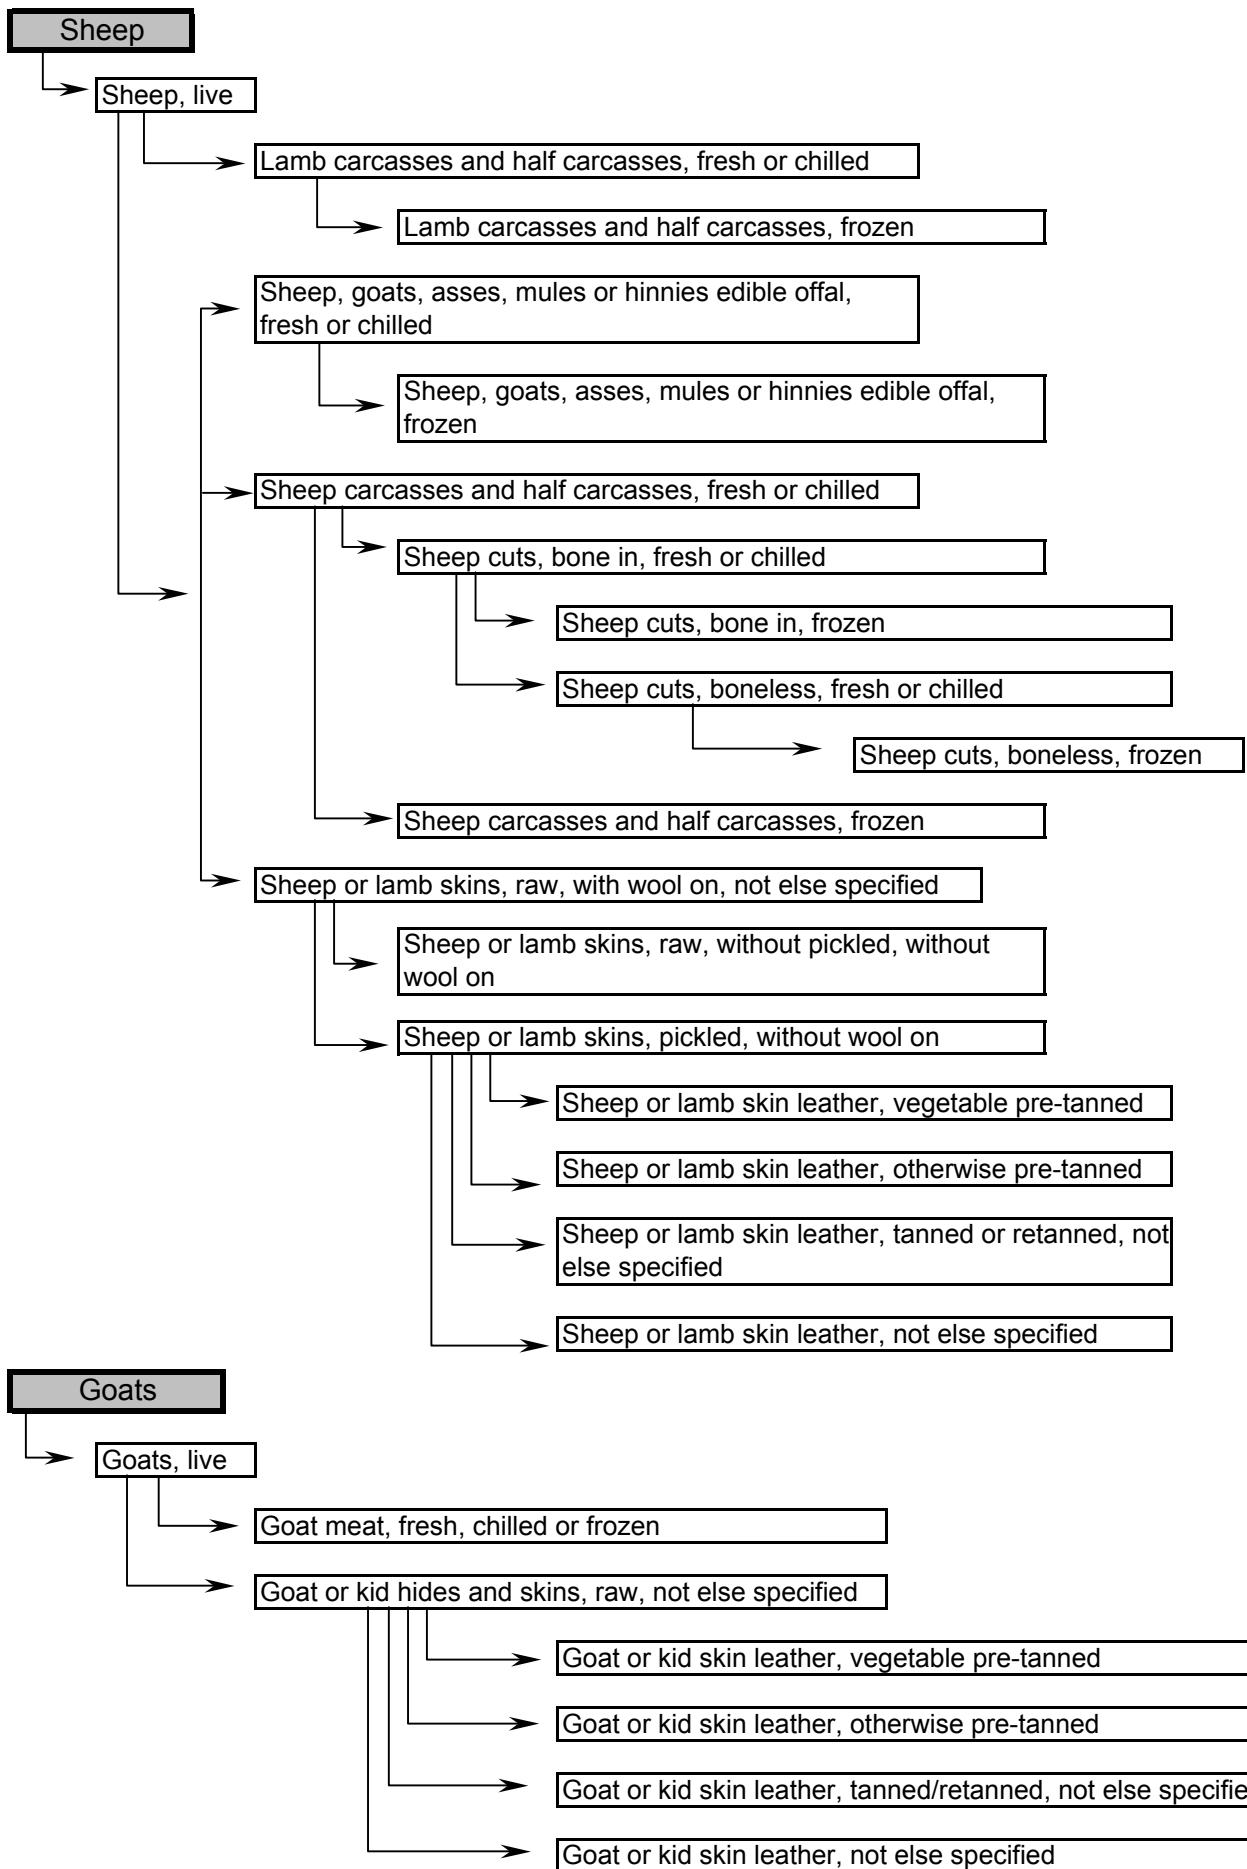

Appendix V. Product tree per animal category

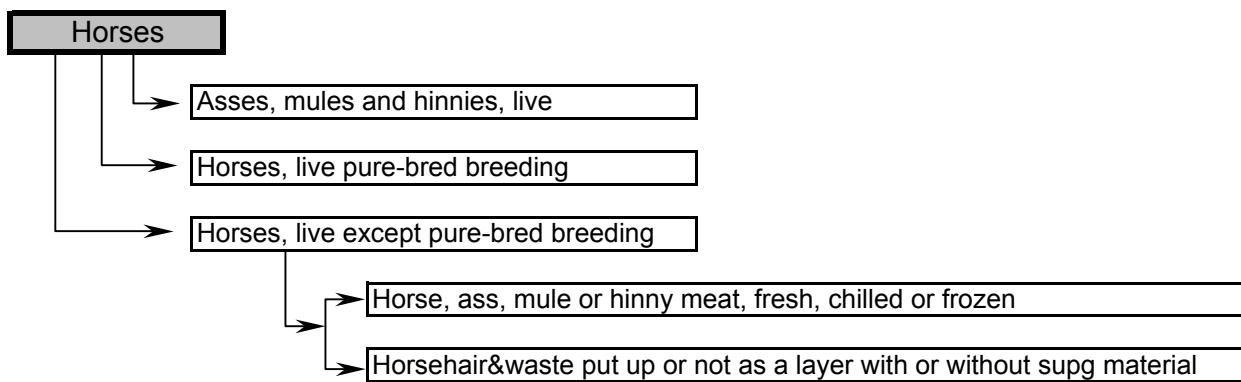

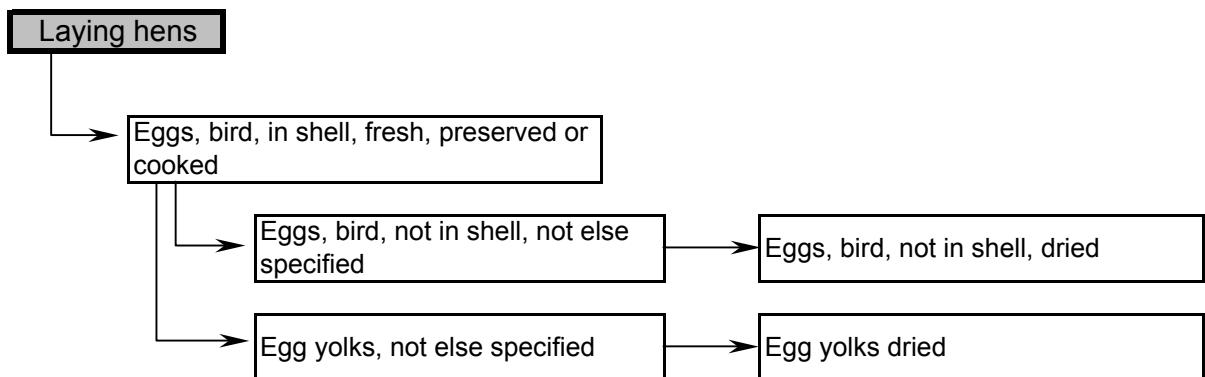

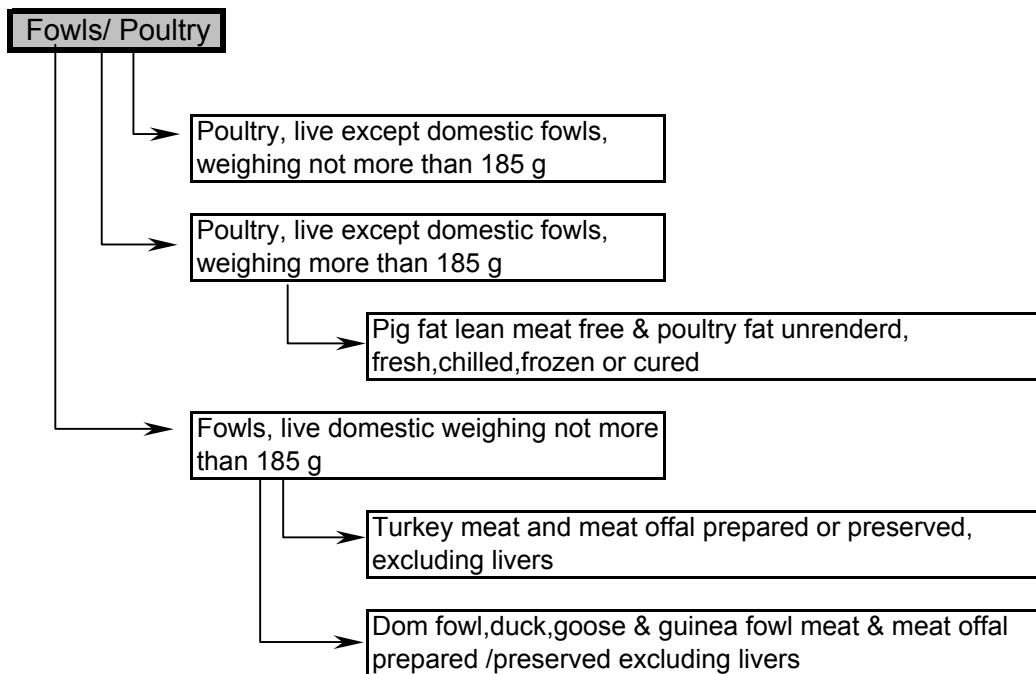

Dairy cows

Others

For the following livestock products, the source animal is not clear from the PC-TAS database. As a product tree could not be plotted for these products, we have simplified the tree by assuming these products are best represented by other products already identified within previous animal categories.

Product code	Product description	Assumed product
010600	Animals, live not else specified	Bovine, live pure-bred breeding
020810	Rabbit or hare meat and edible meat offal, fresh, chilled or frozen	Pig fat lean meat free & poultry fat unrendered, fresh, chilled, frozen or cured
020820	Frog legs, fresh, chilled or frozen	Pig fat lean meat free & poultry fat unrendered, fresh, chilled, frozen or cured
020890	Meat and edible offal, nes fresh, chilled/frozen	Bovine edible offal, fresh or chilled
021090	Meat&edible meat offal cured not else specified & edible meat or offal, flours & meals	Bovine meat and meat offal not else specified, excluding livers, prepared or preserved
030510	Fish meal fit for human consumption	Fowls, live domestic weighing < 185 g
041000	Edible products of animal origin not else specified	Bovine edible offal, fresh or chilled
050100	Hair, human, unworked washed or scoured or not and waste	Bristles, hair and waste of pigs, hogs or boars
050290	Hair and waste of badger and of others	Bristles, hair and waste of pigs, hogs or boars
050400	Guts, bladders and stomachs of animals except fish whole or in pieces	Bovine edible offal, fresh or chilled
160100	Sausage & similar products of meat, meat offal/blood&food prepared based on these products	Bovine edible offal, fresh or chilled
160210	Homogenized preparations of meat and meat offal	Bovine meat and meat offal nes,excluding livers, prepared or preserved
160220	Livers of any animal prepared or preserved	Bovine livers, edible offal, frozen
160290	Meat, meat offal or blood, prepared or preserved, not else specified	Bovine edible offal, fresh or chilled
160300	Extracts & juices of meat,fish,or crust, molluscs /other aquatic invertebrates	Fowls, live domestic weighing < 185 g
410390	Raw hides and skins of animals, not else specified	Bovine skins, whole, raw
410790	Leather, not else specified	Bovine and equine leather, not else specified
410800	Chamois leather	Bovine leather, vegetable pre-tanned, not else specified
410900	Patent leather and patent laminated leather; metallised leather	Bovine leather, vegetable pre-tanned, not else specified
411000	Parings and other waste of leather; leather dust, powder and flour	Bovine leather, vegetable pre-tanned, not else specified
411100	Composition leather, in slabs, sheets or strip	Bovine leather, vegetable pre-tanned, not else specified
420400	Articles of leather or of composition leather, for technical uses	Bovine leather, vegetable pre-tanned, not else specified
420500	Articles of leather or of composition leather, not else specified	Bovine leather, vegetable pre-tanned, not else specified

Appendix VI. Product fraction, value fraction and processing water requirement per livestock product

Appendix VIII. Average world market price per livestock product (1995-99)

Product code (PC-TAS)	Product name	Average world market price ¹ (US\$/ton)
010600	Animals, live, not else specified	4702
420400	Articles of leather or of composition leather, for technical uses	6523
420500	Articles of leather or of composition leather, not else specified	7868
010120	Asses, mules and hinnies, live	360
021012	Bellies, streaky and cuts thereof, swine cured	3085
410431	Bovine and equine leather, full/split grains, not else specified	17980
410439	Bovine and equine leather, not else specified	16976
410429	Bovine and equine leather, tanned or retanned, not else specified	593
020110	Bovine carcasses and half carcasses, fresh or chilled	3568
020210	Bovine carcasses and half carcasses, frozen	1561
020120	Bovine cuts bone in, fresh or chilled	3159
020220	Bovine cuts bone in, frozen	1834
020130	Bovine cuts boneless, fresh or chilled	4146
020230	Bovine cuts boneless, frozen	2090
020610	Bovine edible offal, fresh or chilled	2018
020629	Bovine edible offal, frozen, not else specified	1450
410130	Bovine hides, raw, not else specified	1294
410121	Bovine hides, whole, fresh or wet-salted	1750
410422	Bovine leather, otherwise pre-tanned, not else specified	2278
410421	Bovine leather, vegetable pre-tanned, not else specified	6553
020622	Bovine livers, edible offal, frozen	884
160250	Bovine meat and meat offal not else specified, excluding livers, prepared or preserved	2602
021020	Bovine meat cured	8134
410410	Bovine skin leather, whole	8260
410110	Bovine skins, whole, raw	2233
020621	Bovine tongues, edible offal, frozen	3006
010290	Bovine, live except pure-bred breeding	1949
010210	Bovine, live pure-bred breeding	2218
050210	Bristles, hair and waste of pigs, hogs or boars	4307
040390	Buttermilk, curdled milk & cream, kefir & ferm or acid milk & cream not else specified	1164
410122	Butts and bends, bovine, fresh or wet-salted	2123
410800	Chamois (including combination chamois) leather	21050
040690	Cheese not else specified	3848
040630	Cheese processed, not grated or powdered	3561
040640	Cheese, blue-veined	6266

¹ Average world market price is calculated as the ratio of the total global trade value of a product to the total trade volume of the product.

Product code (PC-TAS)	Product name	Average world market price ¹ (US\$/ton)
040610	Cheese, fresh (including whey cheese) unfermented, and curd	2828
040620	Cheese, grated or powdered, of all kinds	4505
411100	Composition leather, in slabs, sheets or strip	3109
160239	Dom fowl, duck, goose & guinea fowl meat & meat offal prepared / preserved excluding livers	3386
041000	Edible products of animal origin not else specified	10030
040811	Egg yolks dried	3898
040819	Egg yolks not else specified	1976
040700	Eggs, bird, in shell, fresh, preserved or cooked	1202
040899	Eggs, bird, not in shell not else specified	1273
040891	Eggs, bird, not in shell, dried	3854
410140	Equine hides and skins, raw	1576
160300	Extracts & juices of meat, fish, or crust, molluscs/ other aquatic invertebrate	4350
030510	Fish meal fit for human consumption	1271
010511	Fowls, live domestic weighing not more than 185 g	15414
020820	Frog legs, fresh, chilled or frozen	742
020450	Goat meat, fresh, chilled or frozen	2664
410310	Goat or kid hides and skins, raw, not else specified	3862
410620	Goat or kid skin leather, not else specified	29962
410612	Goat or kid skin leather, otherwise pre-tanned	10472
410619	Goat or kid skin leather, tanned or retanned, not else specified	18393
410611	Goat or kid skin leather, vegetable pre-tanned	5996
010420	Goats, live	1657
050400	Guts, bladders and stomachs of animals except fish whole or in pieces	3572
050290	Hair and waste of badger and of other brush making hair	6596
050100	Hair, human, un-worked washed or scoured or not and waste	57
160241	Hams and cuts thereof of swine prepared or preserved	4341
021011	Hams, shoulders and cuts thereof, of swine bone in, cured	4430
020312	Hams, shoulders and cuts thereof, of swine bone in, fresh or chilled	2021
020322	Hams, shoulders and cuts thereof, of swine, bone in, frozen	1899
410129	Hide sections, bovine, not else specified, fresh or wet-salted	1054
160210	Homogenized preparations of meat and meat offal	2378
020500	Horse, ass, mule or hinny meat, fresh, chilled or frozen	2815
050300	Horsehair & waste put up or not as a layer with or without supg material	4783
010119	Horses, live except pure-bred breeding	2996
010111	Horses, live pure-bred breeding	94493
020410	Lamb carcasses and half carcasses, fresh or chilled	3705
020430	Lamb carcasses and half carcasses, frozen	1860
410790	Leather, not else specified	30130

Product code (PC-TAS)	Product name	Average world market price ¹ (US\$/ton)
160220	Livers of any animal prepared or preserved	3941
021090	Meat & edible meat offal cured not else specified & edible meat or offal, flours & meals	1716
020890	Meat and edible meat offal, not else specified, fresh, chilled or frozen	5037
160290	Meat, meat offal or blood, prepared or preserved, not else specified	3324
040130	Milk and cream not concentrated and unsweetened exceeding 6% fat	1582
040299	Milk and cream not else specified sweetened	1242
040229	Milk and cream powder sweetened exceeding 1.5% fat	2055
040221	Milk and cream powder unsweetened exceeding 1.5% fat	2291
040291	Milk and cream unsweetened, not else specified	1090
040120	Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat	428
040110	Milk not concentrated and unsweetened not exceeding 1% fat	312
040210	Milk powder not exceeding 1.5% fat	1940
411000	Parings and other waste of leather; leather dust, powder and flour	1194
410900	Patent leather and patent laminated leather; metallised leather	13586
020900	Pig fat lean meat free & poultry fat unrendered, fresh, chilled, frozen or curd	622
010599	Poultry, live except domestic fowls, weighing more than 185 g	1556
010519	Poultry, live except domestic fowls, weighing not more than 185 g	18174
040490	Products consisting of natural milk constituents sweetened or not, not else specified	1079
020810	Rabbit or hare meat and edible meat offal, fresh, chilled or frozen	3240
410390	Raw hides and skins of animals, not else specified s	1304
160100	Sausage & similar products of meat, meat offal / blood & food prepared based on these products	2589
051110	Semen bovine	77597
020421	Sheep carcasses and half carcasses, fresh or chilled	2279
020441	Sheep carcasses and half carcasses, frozen	1062
020422	Sheep cuts, bone in, fresh or chilled	3989
020442	Sheep cuts, bone in, frozen	2090
020423	Sheep cuts, boneless, fresh or chilled	4080
020443	Sheep cuts, boneless, frozen	2465
410520	Sheep or lamb skin leather, not else specified	53807
410512	Sheep or lamb skin leather, otherwise pre-tanned	7198
410519	Sheep or lamb skin leather, tanned or retanned, not else specified	15944
410511	Sheep or lamb skin leather, vegetable pre-tanned	7267
410221	Sheep or lamb skins, pickled, without wool on	7604
410229	Sheep or lamb skins, raw, o/t pickled, without wool on	2922
410210	Sheep or lamb skins, raw, with wool on, not else specified	2174
020680	Sheep, goats, asses, mules or hinnies edible offal, fresh or chilled	1359
020690	Sheep, goats, asses, mules or hinnies edible offal, frozen	1213
010410	Sheep, live	1138

Product code (PC-TAS)	Product name	Average world market price ¹ (US\$/ton)
160242	Shoulders and cut thereof of swine prepared or preserved	2718
020311	Swine carcasses and half carcasses, fresh or chilled	1830
020321	Swine carcasses and half carcasses, frozen	1324
020319	Swine cuts, fresh or chilled, not else specified	2673
020329	Swine cuts, frozen not else specified	2544
020630	Swine edible offal, fresh or chilled	547
020649	Swine edible offal, frozen, not else specified	811
410710	Swine leather, not else specified	10605
020641	Swine livers, edible offal, frozen	656
021019	Swine meat & meat offal not else specified /excluding livers / including mixtures, prepared or preserved	4121
160249	Swine meat cured, not else specified	2696
010392	Swine, live except pure-bred breeding weighing 50 kg or more	1372
010391	Swine, live except pure-bred breeding weighing less than 50 kg	2210
010310	Swine, live pure-bred breeding	3248
160231	Turkey meat and meat offal prepared or preserved, excluding livers	2872
040410	Whey whether or not concentrated or sweetened	490
040310	Yoghurt concentrated or not, sweetened or not, flavoured or contg, fruit or cocoa	1072

Appendix IX. Calculation of the virtual water content of live animals, example for Canada

Appendix IXa. Calculation of the virtual water content of live animals for the 'grazing system'.

<u>Animal group</u>	<u>Page number</u>
Beef cattle	IXa1 – IXa2
Dairy cows	IXa3 – IXa5
Swine	IXa6 – IXa7
Sheep	IXa8 – IXa9
Goats	IXa10 – IXa11
Broiler chicken	IXa12 – IXa13
Laying hens	IXa14 – IXa15
Horses	IXa16 – IXa17

Appendix IXb. Calculation of the virtual water content of live animals for the 'industrial system'.

<u>Animal group</u>	<u>Page number</u>
Beef cattle	IXb1 – IXb2
Dairy cows	IXb3 – IXb4
Swine	IXb5 – IXb6
Sheep	IXb7 – IXb8
Goats	IXb9 – IXb10
Broiler chicken	IXb11 – IXb12
Laying hens	IXb13 – IXb14
Horses	IXb15 – IXb16

Kind of animal: **Beef cattle**
Farming system: **Grazing**

Virtual water content of a live animal (VWC_a)

$$VWC_a = VWC_{drink} + VWC_{serv} + VWC_{feed}$$

$$= \frac{\text{water from drinking}}{W_a} + \frac{\text{water from servicing}}{W_a} + \frac{\text{water from feed}}{W_a}$$

Live weight of an adult bovine = 0.40 ton/animal

Water from drinking

	Calve	Adult cow
Age (month)	5	36
Range of daily consumption (l/day/animal)	5	22
Average daily consumption (l/day/animal)		13.50

$$\begin{aligned} \text{Total drinking water required} &= \text{Average daily demand * Age} \\ &= 14783 \text{ litre/animal} &= \mathbf{14.78 \text{ m}^3/\text{animal}} \end{aligned}$$

Water from servicing

Water from servicing

$$\begin{aligned} \text{Total service water required} &= \text{assumed to be 50 percent of} \\ &\quad \text{drinking requirement} &= 0.0098 \text{ m}^3/\text{bird} \end{aligned}$$

Water from feed

Virtual water content from feed = Mixing water for feed + virtual water from feed crops

Virtual water contents from feed crops:

Feed crop	Feed quantity (ton/yr)		SWD (m ³ /ton)	Crop water (m ³ /yr)	
	Adult	Average feed volume			
Wheat	0.0108	0.0054	1441	7.78	
Oats			2328		
Barley			1098		
Other small grains			897		
Grain corn	0.0102	0.0051	381	1.94	
Dry peas			1377		
Soyabean meal	0.0034	0.0017	1227	2.09	
Canola meal	0.0020	0.0010	1098	1.10	
Mill screen	0.0017	0.0009	1441	1.23	
Total grain	0.0281	0.0141			
Non grain portion	0.0065	0.0033	381	1.24	Grain
Complete grain based ration	0.0346	0.0173			15.37
Pasture					
Dry hay					
Silage					
Other roughages					Forage
Total roughages					
Total water consumption in the form of feed per year				=	15.37
Total virtual water of feed per bird (m ³ /bird)				= Total yearly value/52*(age/2)	2.96 m ³ /bird

Mixing water for feed preparation

	Average
Total feed volume	0.0033 ton/yr
Mixing water required for the feed preparation approximately 50% of the total feed consumed	0.0016 m ³ /yr
Total quantity (for full life span)	0.002 m ³ /bird

$$\text{Virtual water content of feed} = \quad \quad \quad 2.96 \quad + \quad \quad 0.002 \quad = \quad \quad \quad \mathbf{2.96 \text{ m}^3/\text{bird}}$$

$$\begin{aligned}
 VWC_a &= \frac{\text{water from drinking}}{W_a} + \frac{\text{water from servicing}}{W_a} + \frac{\text{water from feed}}{W_a} \\
 &= \frac{0.02}{0.0022} + \frac{0.01}{0.0022} + \frac{2.96}{0.0022} \\
 &= \frac{9}{0.0022} + \frac{4}{0.0022} + \frac{1344}{0.0022} \\
 &= \mathbf{1358 \text{ m}^3/\text{ton}}
 \end{aligned}$$

Distribution of virtual water content of broilers to its products

$$\begin{aligned}
 \text{Live weight} &= 2.20 \text{ kg} \\
 \text{Dressed weight} &= 1.60 \text{ kg} \\
 \text{Product fraction, pf} &= \text{Dressed weight/live weight} \\
 &= 0.73 \\
 \text{Value fraction, vf} &= 1.00
 \end{aligned}$$

$$\begin{aligned}
 \text{Virtual water content of broiler meat} &= VWC_a * vf/pf \\
 &= \mathbf{1867 \text{ m}^3/\text{ton}}
 \end{aligned}$$

Kind of animal: **Laying hens** *Extensive poultry system (High egg producing varieties)*
Farming system: **Industrial**

Virtual water content of a live bird (VWC_a)

$$VWC_a = VWC_{drink} + VWC_{serv} + VWC_{feed}$$

$$= \frac{\text{water from drinking}}{W_a} + \frac{\text{water from servicing}}{W_a} + \frac{\text{water from feed}}{W_a}$$

Water from drinking

	Chick	Start of laying egg	Adult
Age (weeks)	1	22	75
Range of daily consumption (l/day/bird)	0.02	0.30	0.30
Average daily consumption (l/day/bird)		0.16	0.30

$$\begin{aligned} \text{Total drinking water required} &= 0.16*22*7+0.30*53*7 \\ &= 136 \text{ litre/bird} &= \mathbf{0.14 \text{ m}^3/\text{bird}} \end{aligned}$$

Water from servicing

$$\begin{aligned} \text{Total service water required} &= \text{assumed to be 50 percent} \\ &\quad \text{of drinking requirement} &= \mathbf{0.07 \text{ m}^3/\text{bird}} \end{aligned}$$

Water from feed

Virtual water content from feed = Mixing water for feed + Virtual water from feed crops

Virtual water contents from feed crops:

Feed crop	Feed quantity (ton/yr)		SWD (m ³ /ton)	Crop water	
	Laying hens	Average feed volume		(m ³ /yr)	
Wheat	0.0108	0.0054	1441	7.8	
Oats			2328		
Barley			1098		
Other small grains			897		
Grain corn	0.0102	0.0051	381	1.9	
Dry peas			1377		
Soyabean meal	0.0034	0.0017	1227	2.1

Non grain portion	0.0065	0.0033	381	1.2	Grain
Complete grain based ratio	0.0346	0.0173			15.4
Pasture					
Dry hay					
Silage					
Other roughages					Forage
Total roughages					
Total water consumption in the form of feed per year				15.4	
For growing period	=Total annual value/52*(growing age/			3.3	
For laying period	=Total annual value/52*laying period			15.7	
Total virtual water of feed per bird (m ³ /bird)				18.9	m ³ /bird

Mixing water for feed preparation

	Average	
Total feed volume	0.007	ton/yr
Mixing water required for the feed preparation approximately 50% of the total feed consumed	0.004	m ³ /yr
Total quantity (for full life span)	0.005	m ³ /bird

$$\text{Virtual water content of feed} = 18.92 + 0.005 = \mathbf{18.92 \text{ m}^3/\text{bird}}$$

$$\begin{aligned} VWC_a &= 0.14 + 0.07 \\ &= \mathbf{19 \text{ m}^3/\text{bird}} \\ &= \mathbf{9563 \text{ m}^3/\text{ton}} \end{aligned}$$

Distribution of virtual water content of layers to its products

Primary products

1. Egg	2. Carcass
Nos of eggs produced	300 egg/bird
Weight of an egg	49.61 gram/egg
Total egg produced	14.88 kg/bird
Product fraction	7.44 ton/ton of bird

Product	Quantity (ton/animal)	Market price (US\$/ton)	Value from individual product (US\$)	Total value (US\$/animal)	value fraction (vf)	Share of each product (m ³ /anim al)	VWC (m ³ /ton)
Egg	0.0149	1209	18.00	21.11	0.85	16.30	1095
Carcass	0.0020	1557	3.11		0.15	2.82	1411

Kind of animal: Horses
Farming system: Industrial

Virtual water content of a live animal (VWC_a)

$$VWC_a = VWC_{drink} + VWC_{serv} + VWC_{feed}$$

$$= \frac{\text{water from drinking}}{W_a} + \frac{\text{water from servicing}}{W_a} + \frac{\text{water from feed}}{W_a}$$

Live weight of an adult horse = 0.400 ton/animal

Water from drinking

	Foal	Mature horse
Age (month)	1	24
Range of daily consumption (l/day/animal)	3	45
Average daily consumption (l/day/animal)		24.00

$$\begin{aligned} \text{Total drinking water required} &= \text{Average daily demand} * \text{Age} \\ &= 17520 \text{ litre/animal} = 17.5 \text{ m}^3/\text{animal} \end{aligned}$$

Water from servicing

	Foal	Mature horse
Range of daily consumption (l/day/animal)		5
Average daily consumption (l/day/animal)		2.50

$$\begin{aligned} \text{Total service water required} &= \text{Average daily demand} * \text{Age} \\ &= 1825 \text{ litre/animal} = 1.83 \text{ m}^3/\text{animal} \end{aligned}$$

Water from feed

Virtual water content of feed = Direct mixing water for feed + Virtual water from feed crops

Virtual water contents from feed crops:

Feed crop	Feed quantity (ton/yr)		SWD (m ³ /ton)	Crop water (m ³ /yr)	
	Adult horse	Average feed volume			
Wheat	0.001		0.001	1441	0.7
Oats	0.196		0.098	2328	228.2
Barley	0.078		0.039	1098	42.8
Other small grains	0.012		0.006	897	5.4
Grain corn	0.025		0.013	381	4.8
Dry peas	0.002		0.001	1377	1.4
Soyabean meal	0.026		0.013	1227	16.0
Canola meal	0.003		0.002	1098	1.6
Mill screen	0.002		0.001	1441	1.4
Total grain	0.345		0.173		
Non grain portion	0.020		0.010	381	3.8
Complete grain based ration	0.37		0.18		306
Pasture	1.51		0.75	445	335.3
Dry hay	1.76		0.88	494	435.6
Silage	0.05		0.02	494	12.1
Other roughages	0.06		0.03	445	13.8
Total roughages	3.38		1.69		797
Total water consumption in the form of feed per year				= 1103 m ³ /year	
Total volume of water from feed = Age in years * water per year				= 2206 m ³ /animal	

Mixing water for feed preparation

	Average
Total feed volume (ton/yr)	1.69 ton/yr
Mixing water required for the feed preparation approximately 50% of the total feed consumed	0.85 m ³ /yr
Total quantity (for full life span)	1.69 m³/animal

Virtual water content of feed = 2206 + 1.69 = **2207 m³/animal**

$$\begin{aligned}
 VWC_a &= \frac{\text{water from drinking}}{W_a} + \frac{\text{water from servicing}}{W_a} + \frac{\text{water from feed}}{W_a} \\
 &= \frac{17.52}{0.400} + \frac{1.83}{0.400} + \frac{2207}{0.400} \\
 &= 44 + 5 + 5519 \\
 &= **5567 m³/ton**
 \end{aligned}$$

Note: The reasons for matching virtual water content of live animals for few countries are: first the climate data used for the crop water requirements are same for these countries and second these countries have similar farming system.

Appendix XI. Virtual water content per type of livestock product by country (m³/ton)

For explanation of product codes the reader is referred to Appendix II.

Appendix XII. International virtual flows by livestock product (1995-99)

Product code	Product	Virtual water flow	
		Volume (Gm ³ /yr)	Contribution to global volume (%)
020230	Bovine cuts boneless, frozen	53.98	16.09
410429	Bovine and equine leather, tanned or retanned, not else specified	41.26	12.30
020130	Bovine cuts boneless, fresh or chilled	26.06	7.77
010290	Bovine, live except pure-bred breeding	20.48	6.10
410121	Bovine hides, whole, fresh or wet-salted	20.08	5.98
410422	Bovine leather, otherwise pre-tanned, not else specified	14.13	4.21
020120	Bovine cuts bone in, fresh or chilled	13.13	3.91
040690	Cheese not else specified	9.64	2.87
040210	Milk powder not exceeding 1.5% fat	7.53	2.24
040221	Milk and cream powder unsweetened exceeding 1.5% fat	7.35	2.19
410431	Bovine and equine leather, full/split grains, not else specified	6.56	1.95
160250	Bovine meat and meat offal not else specified, excluding livers, prepared or preserved	6.36	1.89
020329	Swine cuts, frozen not else specified	5.55	1.65
160100	Sausage & similar products of meat, meat offal / blood & food prepared based on these products	5.25	1.56
020110	Bovine carcasses and half carcasses, fresh or chilled	4.81	1.43
020220	Bovine cuts bone in, frozen	4.02	1.20
020629	Bovine edible offal, frozen, not else specified	3.82	1.14
410439	Bovine and equine leather, not else specified	3.77	1.12
040120	Milk not concentrated & unsweetened exceeding 1% not exceeding 6% fat	3.61	1.08
050400	Guts, bladders and stomachs of animals except fish whole or in pieces	3.52	1.05
010410	Sheep, live	3.28	0.98
020319	Swine cuts, fresh or chilled, not else specified	3.27	0.97
411000	Parings and other waste of leather; leather dust, powder and flour	3.04	0.90
020312	Hams, shoulders and cuts thereof, of swine bone in, fresh or chilled	2.98	0.89
420500	Articles of leather or of composition leather, not else specified	2.93	0.87
020442	Sheep cuts, bone in, frozen	2.73	0.81
410410	Bovine skin leather, whole	2.66	0.79
010392	Swine, live except pure-bred breeding weighing 50 kg or more	2.56	0.76
040700	Eggs, bird, in shell, fresh, preserved or cooked	1.84	0.55
410110	Bovine skins, whole, raw	1.77	0.53
410210	Sheep or lamb skins, raw, with wool on, not else specified	1.76	0.52
040630	Cheese processed, not grated or powdered	1.70	0.51
020311	Swine carcasses and half carcasses, fresh or chilled	1.67	0.50
020621	Bovine tongues, edible offal, frozen	1.63	0.49

Product code	Product	Virtual water flow	
		Volume (Gm ³ /yr)	Contribution to global volume (%)
020443	Sheep cuts, boneless, frozen	1.57	0.47
410390	Raw hides and skins of animals, not else specified s	1.48	0.44
010210	Bovine, live pure-bred breeding	1.42	0.42

Appendix XVI. Grouping of countries into thirteen world regions

North Africa	Central Africa	Middle East
Algeria	Burundi	Bahrain
Benin	Cameroon	Iran
Burkina Faso	Central African Republic	Iraq
Cape Verde	Comoros	Israel
Chad	Equatorial Guinea	Jordan
Djibouti	Gabon	Kuwait
Egypt	Kenya	Lebanon
Eritrea	Rwanda	Oman
Ethiopia	Sao Tome and Principe	Qatar
Gambia	Seychelles	Saudi Arabia
Ghana	Tanzania	Syria
Guinea	Uganda	Turkey
Guinea-Bissau	Zaire	United Arab Emirates
Ivory Coast	Southern Africa	
Liberia	Angola	Yemen
Libya	Madagascar	
Mali	Malawi	
Mauritania	Mauritius	
Morocco	Mozambique	
Niger	Reunion	
Nigeria	South Africa	
Senegal	St. Helena	
Sierra Leone	Zambia	
Somalia	Zimbabwe	
Sudan		
Togo		
Tunisia		
Western Sahara		

Eastern Europe	Western Europe	South East Asia
Albania	Andorra	Bangladesh
Bosnia and Herzegovina	Austria	Brunei
Bulgaria	Belgium- Luxembourg	Cambodia
Croatia	Denmark	Indonesia
Cyprus	Faroe Islands	Laos
Czech Republic	Finland	Malaysia
Estonia	France	Myanmar (Burma)
Greece	Germany	Philippines
Hungary	Gibraltar	Singapore
Latvia	Greenland	Thailand
Lithuania	Ireland	Vietnam
Macedonia	Italy	Central and South Asia
Poland	Malta	Afghanistan
Romania	Monaco	Bermuda
Slovakia	Netherlands	Bhutan
Slovenia	Norway	China
Yugoslavia	Portugal	India
FSU	Spain	Japan
Armenia	Svalbard	Macau
Azerbaijan	Sweden	Maldives
Byelarus	Switzerland	Mongolia
Georgia	United Kingdom	Nepal
Kazakhstan		North Korea
Kyrgyzstan		Pakistan
Moldova		South Korea
Russia		Sri Lanka
Tajikistan		Taiwan
Turkmenistan		Hong Kong
Ukraine		
Uzbekistan		

Central America	North America	Oceania
Anguilla	Canada	Australia
Antigua and Barbuda	St. Pierre and Miquelon	Christmas Island
Aruba	United States	Cocos (Keeling) Islands
Bahamas, The		Cook Islands
Barbados		Fiji
Belize		French Polynesia
British Virgin Islands		Guam
Cayman Islands		Kiribati
Costa Rica	British Indian Ocean Territory	Marshall Islands
Cuba	Chile	Micronesia
Dominica	Colombia	Nauru
Dominican Republic	Ecuador	New Caledonia
El Salvador	Falkland Islands (Islas Malvinas)	New Zealand
Grenada	French Guiana	Niue
Guadeloupe	French Southern & Antarctic Lands	Norfolk Island
Guatemala	Guyana	Northern Mariana Islands
Haiti	Paraguay	Pacific Islands (Palau)
Honduras	Peru	Papua New Guinea
Jamaica	Suriname	Pitcairn Islands
Martinique	Uruguay	Solomon Islands
Mexico	Venezuela	Tokelau
Montserrat		Tonga
Netherlands Antilles		Tuvalu
Nicaragua		Vanuatu
Panama		Wallis and Futuna
St. Kitts and Nevis		Samoa
St. Lucia		
St. Vincent and the Grenadines		
Trinidad and Tobago		
Turks and Caicos Islands		

Appendix XVII. Gross virtual water flows between and within regions in the period 1995-99

Appendix XIX. Glossary

Virtual water

Virtual water content – The virtual water content of a product is the volume of water used to produce the product, measured at the place where the product was actually produced (*production site specific definition*). The virtual water content of a product can also be defined as the volume of water that would have been required to produce the product in the place where the product is consumed (*consumption site specific definition*). [In this study we use the production site specific definition.]

Virtual water export – The virtual water export of a country or region is the volume of virtual water associated with the export of goods or services from the country or region. It is the total volume of water required to produce the products for export.

Virtual water import – The virtual water import of a country or region is the volume of virtual water associated with the import of goods or services into the country or region. It is the total volume of water required (in the export countries) to produce the import products. Viewed from the perspective of the importing country, this water can be seen as an additional source of water that comes on top of the domestically available water resources.

Virtual water flow – The virtual water flow between two nations or regions is the volume of virtual water that is being transferred from one place to another as a result of product trade.

Virtual water balance – The virtual water balance of a country over a certain time period is defined as the net import of virtual water over this period, which is equal to the gross import of virtual water minus the gross export. A positive virtual water balance implies net inflow of virtual water to the country from other countries. A negative balance means net outflow of virtual water.

Virtual water import dependency – Countries with net import of virtual water depend, de facto, on the water resources available in other parts of the world. The virtual water import dependency of a country or region is defined as the ratio of the net virtual water import of the country or region to its total water footprint.

Water footprint

Nation's water footprint – The water footprint of a nation is defined as the total amount of water that is used to produce the goods and services consumed by the inhabitants of the nation. The footprint is generally expressed in terms of the volume of water use *per year*. The national water footprint can be assessed in two ways. The bottom-up approach is to consider the sum of all goods and services consumed multiplied with their respective virtual water content. It should be noted that the virtual water content of one particular consumption good can

vary as a function of the place and conditions of production. In the top-down approach, the water footprint of a nation can be calculated as the total use of domestic water resources plus the net virtual water import.

Individual water footprint – The water footprint of an individual is defined as the total water used for the production of the goods and services consumed by the individual. It can be estimated by multiplying all goods and services consumed by their respective virtual water content.

Blue water footprint vs. green water footprint – The total water footprint of a nation or individual falls apart into two components: the blue and the green water footprint. The blue water footprint is the volume of water withdrawn from the global blue water resources (surface water and ground water) to fulfil the national or individual demand for goods and services. The green water footprint is the volume of water used from the global green water resources (water stored in soil as soil moisture) to fulfil the demand for goods and services.

Total water footprint vs. evaporative water footprint – The total water footprint includes all green and blue water use, also the parts of the blue water withdrawals that return to the groundwater and surface water system in the form of return flows. It is useful to include these return flows in the total water footprint, because although returning they are not always reusable due to pollution. The ‘evaporative’ or ‘consumptive’ water footprint is more narrowly defined, as the total volume of water that is used for the production of goods and services and lost to the atmosphere through evapo(transpi)ration.

The water footprint within the country vs. the water footprint outside the country – The total water footprint of a country falls apart into two components: the part of the footprint that falls inside the country and the part of the footprint that presses on other countries in the world. The distinction refers to the difference between the use of domestic water resources versus the use of foreign water resources.

Assessing the virtual water content of processed products

Product tree – A product tree is a symbolic representation of how various (secondary, tertiary, etc.) products are obtained from one primary product.

Product fraction – A product fraction indicates how much secondary (tertiary, etc.) product (in ton) is obtained from one ton of primary (secondary, etc.) product.

Primary products – Primary products are the products derived directly from our natural resource base. They are for instance the crops harvested from the land or the raw milk, raw skin and carcass derived from a cow.

Secondary (tertiary, etc.) products – Secondary products and so on are the products obtained from processing a primary product. Secondary products are for instance bread (from the primary product wheat), cheese and butter (from the primary product milk) and meat and sausage (from the primary product carcass). A tertiary product is for instance boneless meat (from the secondary product meat).

Value fraction – Suppose that one product is processed into two or more derived products. In such a case, the value fraction of one derived product is the ratio of the market value of this derived product to the sum of market values of all derived products. Value fractions are used to determine how the total virtual water content of a parent product is distributed over its various derived products.

Value of Water Research Report Series

1. Exploring methods to assess the value of water: A case study on the Zambezi basin.
A.K. Chapagain – February 2000
2. Water value flows: A case study on the Zambezi basin.
A.Y. Hoekstra, H.H.G. Savenije and A.K. Chapagain – March 2000
3. The water value-flow concept.
I.M. Seyam and A.Y. Hoekstra – December 2000
4. The value of irrigation water in Nyanyadzi smallholder irrigation scheme, Zimbabwe.
G.T. Pazvakawambwa and P. van der Zaag – January 2001
5. The economic valuation of water: Principles and methods
J.I. Agudelo – August 2001
6. The economic valuation of water for agriculture: A simple method applied to the eight Zambezi basin countries
J.I. Agudelo and A.Y. Hoekstra – August 2001
7. The value of freshwater wetlands in the Zambezi basin
I.M. Seyam, A.Y. Hoekstra, G.S. Ngabirano and H.H.G. Savenije – August 2001
8. ‘Demand management’ and ‘Water as an economic good’: Paradigms with pitfalls
H.H.G. Savenije and P. van der Zaag – October 2001
9. Why water is not an ordinary economic good
H.H.G. Savenije – October 2001
10. Calculation methods to assess the value of upstream water flows and storage as a function of downstream benefits
I.M. Seyam, A.Y. Hoekstra and H.H.G. Savenije – October 2001
11. Virtual water trade: A quantification of virtual water flows between nations in relation to international crop trade
A.Y. Hoekstra and P.Q. Hung – September 2002
12. Virtual water trade: Proceedings of the international expert meeting on virtual water trade
A.Y. Hoekstra (ed.) – February 2003
13. Virtual water flows between nations in relation to trade in livestock and livestock products
A.K. Chapagain and A.Y. Hoekstra – August 2003
14. The water needed to have the Dutch drink coffee
A.K. Chapagain and A.Y. Hoekstra – August 2003
15. The water needed to have the Dutch drink tea
A.K. Chapagain and A.Y. Hoekstra – August 2003
